

Name	IRFHAN A	
E-Mail Id	milton.irfhan@gmail.com	Mobile Number : +91 8124639749
Experience Summary		
3 Years of experience in TCS 1.6 months worked on EC2 instance and server maintenance in AWS. 0.8 Months worked in Validation of Manual Testing and Black box testing and C++. 0.7 months working in NEXTGEN AI in python. - Experienced in C, C++, Embedded-C Languages and AWS - Well experienced in Production and Problem-solving analysis. - Involved in the system release activity which includes testing different subsystems deliverables. - Successful in troubleshooting and debugging. Supportive and enthusiastic team player to dedicated to streamlining processes. - Good Communication and interpersonal skills, Adaptable and willing to learn new technologies.		
Skill Summary		
Languages	C, C++, Embedded-C, Python(Intermediate), PYATS(Intermediate), Selenium(Beginner)	
Operating System	Linux, Windows	
Hardware	Raspberry Pi	
Protocols	SPI, I2C and UART, AWS – EC2(HTTP, TCP), CAN(basic)	
Education	B.E(ECE)	
Tools & Debuggers	Eclipse, Git, Doors, Putty, HCL Compass, DR Axis, Jira tool, Amber tool, Edgewizard, Open vino	
Project Summary		
TCS Internal Tata Consultancy Service	Title : NextGen AI Duration : Aug 2023 to Present Platform : Linux Language : C++, Python Worked on Edgewizard developing using python script for testing the image and audio classifications software, focusing on model evaluation. Executing testing process. Wrote python scripts to facilitate testing and validation of generated models. Worked on POC for Amber Molecular Dynamics and VMD. Amber Tools consists of several independently developed packages that work well by themselves and with Amber 22. The suite can also be used to carry out complete molecular dynamics simulation, with either explicit water or	

	generalized Born Solvent models. Worked on POC for Optimizing cholla's performance for enhanced computational power in Piecewise Linear Method with constraints
Client: Thomson Reuters Tata consultancy services	Title: Network Engineer (Analyst) Duration: May 2021 to Sep 2022 Project Description: Maintenance the server in AWS Technical Skills: Programming Languages: AWS Operating Systems: Linux Responsibilities: Maintenance of AWS production server and QA server in westlaw and Europe countries using linux. Maintenance the app server application using EC2 Protocols.
Client: General Electronics(GE) (On-site) Tata Consultancy Services.	Title: WH and Coreinfra Duration: Sep 2022 to June 2023 Project Description: Senographe Pristina: Senographe Pristina is a digital breast diagnostic system to screen the breast disorder in the women, It offers 2D images, 3D images and contrast enhanced images. • Serena: Serena is a cancer detection system provides the option of accessing the breast with the newly designed approach. It offers biopsy experience in different modes Technical Skills: Programming Language: C++. Python Script, linux commands Operating Systems: Linux Responsibilities: • Fixing customer/field issues, which involves reproduction, debugging and code fix and commits, daily status updates, answering customer queries. • Worked with Medical device testing. Mention the labelling on medical devices to better understanding for users. • Verifying the SPR's in HCL COMPASS Tool and User-stories in Rally. • Involved in the system release activities which includes testing of different subsystem deliverables.
