Bangalore, Karnataka

SKILLS

Management Skills: **Project**

Management, Team Leadership, Strategic Planning, Communication, Problem Solving, Conflict Resolution

Technologies/Tools: **AWS, Debezium, PIG,**

HIVE, SQOOP, HBASE, OOOIE, FLUME, Map Reduce, Apache SPARK, Pyspark, Kafka, Elastic Search, Snowflake, DBT, Athena, Django, Apache Delta Lake, Trino

Cloud Technologies:

Microsoft Azure (Synapse Analytics, Databricks, Azure data Factory, Azure SQL), AWS (DynamoDB, Glue, Athena, EMR, Redshift, Lambda, Kinesis), Google Cloud Platform, Big Query, Big Table

Data Engineering Craft: : **DB schema, DB Design, Data Processing, ETL, CDC, Reporting, Data Warehouse, Data Lake**

Engineering Craft: **System Design, Design Patterns, Architecture, CI CD, Unit Testing, Design/Code Reviews**

Programming Languages: **Python, Scala, Java**

Databases: **Oracle SQL, MY SQL, Elastic Search, PostgreSQL, Hbase, MongoDB**
Storage: **Data Lake, HDFS, S3, Azure delta lake**

PROFILE

Engineering Manager with over 11+ years of IT experience in the Consumer Products, Banking, and Retail sectors as a Data Professional, Big Data/Technical Data Architect, Data Analyst, and Consultant, utilizing market-leading ETL, BI tools, and open-source technology and cloud technologies, i.e., AWS and Microsoft Azure. Expertise in Data Warehousing, Integration, Migration, Modeling, Profiling, Cleaning, Big Data, and Advanced Analytics, Machine Learning, AWS, Azure Data Factory, and Databricks. Currently serving notice.

WORK EXPERIENCE

Paytm Payment Bank (Banking Domain) Engineering Manager - Data Platform

April 2022 - present

- Spearheaded technical direction and oversight for data engineering teams, providing guidance on solution design, data design, and usage, while ensuring alignment with organizational goals and standards, and leading teams of data engineers and support professionals in areas such as architecture, production support, and project scheduling.
- Oversaw project recruitment, retention, and staff performance, ensuring effective team management and development.
- Accountable for end-to-end delivery of Paytm Banking Data Sources ingestion, transformation, and extraction from and to Enterprise Data Lake, Enterprise Data Warehouse, and Global Data & Analytics Platform.
- Negotiated project requirements with stakeholders, including scope, schedule, cost, resources, integration, change, and quality, to ensure successful project delivery.
- Designed and implemented a configurable, generic preprocess engine using Spark, increasing data ingestion efficiency by 87.5% and eliminating the need for custom code for each integration (40+ data sources).

Tide (Fintech Domain) Senior Tech Lead - Data Engineering

July 2021 - April 2022 (C2H)

- Implemented data partitioning on Big data using Azure Databricks, decreasing processing time by 50%
- Leveraged Azure Data Lake Storage to solve data retention policies, improving data access reliability by 35%
- Designed and developed a highly efficient data pipeline to ingest, store, and process data from multiple sources, resulting in a 30% reduction in data processing time and improved data accuracy.
- Scaling financial aggregation and analytics on large clusters
- Managed a team of 6 data engineers to deliver projects ahead of schedule with a 30% increase in productivity
- Streamlined code integration process, reducing release time by 15%

EDUCATION

Btech In Electronics &

Telecommunication

2009 - 2012

Nike (E-commerce) Architect in Data & Analytics

Feb 2020 - Jun 2021 (C2H)

- Spearheaded data engineering projects using Agile frameworks, emphasizing collaboration, adaptability, and continuous improvement to drive project velocity and deliver data-driven business value.
- Engineered and implemented scalable data flow solutions using Hive, AWS, Pyspark, Airflow, Snowflake, and Athena, driving long-term technical and business value through enhanced data processing, storage, and analytics capabilities.
- Initiated data democratization, allowing non-technical teams to leverage data effectively
- Contributed to the design and implementation of a scalable data lake, improving data storage capacity by 60%
- Building data insightful metrics feeding reporting and other applications.
- Supporting team, like mentoring and training new engineers joining our team and conducting code reviews for data flow/data application implementations.
- Collaborated with cross-functional teams to integrate third-party APIs, resulting in a 40% reduction in manual data entry and a significant decrease in human error.

DBS Bank (Banking Domain) Senior Tech Lead - Backend Data Engineer

Oct 2017 - July 2019

- Collaborated with business stakeholders to define data requirements and develop scalable data modeling solutions.
- Developed a key data pipeline to process over 500 TB of data by consolidating data from multiple disparate sources into a single destination, enabling quick data analysis for reliable business insights
- Streaming data analysis using Kafka spark streaming
- Delivered 50+ Big Data requests to increase data correctness, quality, and completeness, thereby allowing decisions made from Big Data analysis to occur faster.
- Collaborated with 25+ global technology professionals including product and data science teams on multiple projects including idea generation, implementation, testing, and success measurement.
- Migrated entire company workload to AWS cloud leveraging EC2 and S3 for efficient scaling, increasing efficiency by 40%

TCS - Senior Data Engineer

Feb 2013 - Aug 2017

- Help build a next-generation Big Data analytics framework with a set of core technologies
- Code, test, and document new or modified data systems to create robust and scalable applications for data analytics
- Builds robust systems with an eye on the long term maintenance and support of the application
- Leverage reusable code modules to solve problems across the team and organization
- Perform data cleansing, data consolidation and data standardization
