OBJECTIVE

Data Engineer with 2 years of experience building scalable data pipelines and working with Azure cloud platforms. Proven ability to optimize workflows, enhance data quality, and integrate diverse data sources for actionable insights. Seeking a full-time position to apply my expertise in big data technologies, cloud engineering, and ETL processes.

EDUCATION

Bachelor of Engineering , Chandigarh University
Computer Science and Engineering.

2018- 2022

SKILLS

Core Skills	Python, SQL, PySpark, ETL Processes, Pandas, NumPy
Platforms & Tools	Azure (Data Factory, Databricks, Synapse), Snowflake, Power BI
Professional Skills	Leadership, Problem Solving, Adaptability, Analytical Thinking, Project Management

EXPERIENCE

Data Engineer Cognizant	Jun 2022 - Present <i>Noida, Uttar Pradesh</i>
-----------------------------------	---

- Optimized over 50 data pipelines using Python, PySpark, SQL, and Azure, boosting efficiency by 30 percent and reducing processing time by 40 percent.
- Migrated 5TB of on-premise data to Azure cloud storage, improving data retrieval times by 40 percent and cutting infrastructure costs by 25 percent.
- Automated data workflows with Azure Data Factory and optimized queries and indexing, improving data fetching efficiency by 30 percent while enhancing integration across the data life cycle.
- Ensured compliance with data governance and security protocols, maintaining high standards of data quality and privacy.

Web Development Training Internshala	April 2020 - Jun 2020 <i>Chandigarh, India</i>
--	---

- Developed proficiency in HTML, CSS, and JavaScript through comprehensive training programs.
- Gained hands-on experience with modern frameworks including Bootstrap and React, enhancing front-end development capabilities .
- Demonstrated technical skills and applied knowledge through various hands-on projects and practical applications, showcasing ability to build responsive and dynamic web applications.

PROJECTS

Azure Data Pipeline for Data Transformation and Validation : Built data pipelines in Azure Data Factory for seamless ingestion from multiple sources. Performed complex transformations using Azure Databricks and ensured data accuracy through SQL-based validations across the data lifecycle.

Scalable Data Pipeline for Real-time Analytic : Developed a cloud-based data pipeline to ingest, process, and store real-time data using Apache Kafka, Apache Spark, and AWS S3. Automated workflows with Apache Airflow and created real-time dashboards in Power BI for improved data-driven decision-making.

CERTIFICATE

- Microsoft Certified: Azure Data Fundamentals ([DP-900](#)) - April 2024.
- Microsoft Certified: Azure Fundamentals ([AZ-900](#)) - October 2023.
