- Proactive, result-oriented RPA developer with problem solving and analytical skills
- Designing, developing and testing automation workflows
- Providing guidance to clients and developers throughout the process design phase
- Extensive experience on TESTING
- RPA Tester - Scenario base Testing & UAT Test case creation and execution
- Successfully working in high-pressure environments
- Hands on experience in –Exceptional Handling and REFramework

EXPERIENCE

RPA Developer

EY GDS | Oct 2021-Mar 2023

Project Name: LOCKBOX

- Lockbox is a Cheque Payment Method used in the United States
- In This Automation, We Receive Invoices, DataPoints as well as Cheques For Each Batch Via the ImageRps Application
- Many Banks and the customers in United States had employed this payment Method
- Our Organisation handled One Such Process to make an Change in US Financial Sector

Roles & Responsibilities:

- Created automation Modules using uipath to meet Project Requirements.
- We used to validate and Match the cheques and stubb fields which helps operators to minimize the operations by 50%-60%

Project Name: CBP Wire Labelling Attended

- This project is a banking Process in which client must build wires that must be updated in the Applications.
- Traditionally, Users had to navigate to many Applications and then validate the obligor's name in Each Program Before Creating Wires

Roles & Responsibilities

- We Automated this Process Which Decreased Repetive and TimeConsuming Work for the Operator While also Increasing Work Speed.
- This was the attended Bot and based on data,We offered the Validation Station, where the user could also validate the data

SKILLS

- | | |
