SUMMARY

Blockchain Developer with over 2.5 years of experience, specializing in the **Substrate framework**, **Polkadot blockchain**, **DAO platforms**, and **smart contract development** using **Solidity** and **Rust**. Skilled in **blockchain deployment**, **consensus algorithms**, and integrating blockchain solutions into decentralized systems. Proven expertise in building and optimizing scalable blockchain applications

EXPERIENCE

Software engineer

Antier Solutions

January 2022 - Present, Mohali

- **Blockchain Developer** with expertise in the **Substrate and Polkadot ecosystem**, **DAO architecture**, and **smart contract development** using **Solidity** and **Rust**. Skilled in **blockchain deployment**, maintaining decentralized networks, and integrating **backend services** with **dApp** and **Web3** functionalities. Experienced in building secure, upgradable smart contracts and scalable blockchain infrastructures.

PROJECTS

Vine blockchain

Antier solutions • <https://vne.network/>

- developed and deployed the core blockchain of Vine Blockchain, created an NFT marketplace, contributed to the architecture of Vine DAO, and implemented naming service contracts on the Vine Blockchain

5irechain

Antier solutions • 5irescan.io/dashboard

- I worked on the core blockchain of 5irechain, developed a staking platform, implemented liquid staking contract.

defi solutions

Antier solutions

- Developed a staking platform on a custom EVM chain, supporting over 650,000 active users, using ethers.js and Hardhat for deploying and testing smart contracts. I also prototyped lending and borrowing protocols for Real-World Asset (RWA) tokenization, leveraging Tokeny T-REX standards for compliant token issuance. Additionally, I assisted with frontend integration to ensure real-time display of prices and metrics, and designed smart contracts for lending, borrowing, and vesting protocols with a focus on liquidity management and user experience

EDUCATION

Btech computer science

Chitkara university • Rajpura • 2022

SKILLS

Proficient in smart contract development in solidity(EVM based blockchains)

Worked extensively with libraries like polkadotjs, ethersjs, web3.js

Concepts of marketplace, NFT, staking, lending-borrowing, DeFi, and ownership

Executed multiple mainnet and testnet blockchain deployments, ensuring reliable network performance, security, and seamless upgrades.
