- **PUC (SCIENCE):** Chandrakant Patil Memorial PU College Kalaburagi.
- **SSLC:** Mount Carmel Convent School Shahabad Kalaburagi.

SKILLS:

- SQL
- Excel
- PYTHON
- Data Analysis
- Power BI

PROJECT 'S:

● Geolocation Based Medical Emergency using Android.

- This android application is developed using android studio with JAVA as a programming language.
- This application help the users to find the nearest location of the hospital around them and can register and search for the pharmacy, doctor and ambulance according to there needs.
- The user can easily schedule appointment, and patient don't need to carry his history reports to hospital every time.

● Kidney stone detector using python.

- Kidney stone detector is a software application or system that uses various image processing and computer vision techniques to automatically identify and locate the kidney stone in medical images such as X- ray, CT scan, ultrasound image.
- The goal of the kidney stone detector is to help the medical professional to quickly and accurately diagnosing the presence of kidney stone.

CERTIFICATION:

- Certificate of attending the international seminar on "Robotics and Conceptual Thinking in Higher Education".

INTERNSHIP:

- 3 Month's internship on Python programming language (Organ Donation Transplantation System using python).

- The organ donation and transplantation system involves the process of voluntarily giving organs from a deceased or living donor to another person in need.
- In many countries, there are organized systems to facilitate this, including registration as an organ donor, protocols for deceased donation, and allocation systems for distributing organs fairly.
- This system aims to save lives by providing organs to those with organ failure, such as kidney, liver, heart, lung, or pancreas failure, among others.

LANGUAGE KNOW:

- English.
- Kannada.
- Hindi.
- Marathi.
