Work experience

Software Engineer - Backend — Wakefit Bengaluru, India

Since January 2022

Tech Stack: Python, Django, MySQL, Redis, Celery, RabbitMQ

- POC/Owner for refunds, giftcard, notifications modules.
- Added many features/bug fixes in refunds module making system robust enough to handle 70% more traffic (now handling 50k+ refunds quarterly amounting 42.8 cr). By projects including:
 - Introducing refund flow for retail store orders (60+ stores using POS machines), Morpheus refund reversal, order to cart distribution issues, credit card discounting, pincode based pricing, etc. Using APIs from various payment aggregators and gateways.
- Automated the Giftcard app for all activities like order cancellation, return, modification, RTS, replacement, sale benefit, etc which accounts for 2.5cr+ revenue yearly.
- Revamped notifications module from hardcoded to db config based to ease PMs to control it without dev intervention and reducing sms failure rates from 15% to less than 2% affecting 45k+ sms/whatsapp communications.
- Responsible for all tech support issues on refunds, payments, giftcards - Lead and guide the support engineers, making scripts to automate issues, keep supervision on escalations enabling smooth flow during and post Diwali Sale period (6x usual traffic).
- Also took tasks in various other modules/features like Invoicing, CRM - Universal Order search, CSAT surveys, etc
- Did a security audit in both SSP and CRM on various APIs including payment, replacement, modification uncovering system flaws that led to saving 8lakh+ revenue loss yearly.
- Currently taking tasks on consumer app backend involving marketing automation APIs, unboxed search and other client facing APIs.

Software Engineer - Intern — Innovaccer Inc. Noida, India

From January 2021 to July 2021

Part of Infra and Production Engineering teams.

- Managed infrastructure across 40+ AWS accounts for various clients, addressing production issues and minimizing downtimes.
- Hands on in AWS services including IAM, EC2, SFTP, RDS, and S3.
- Leveraged Linux terminal for resource access and modification in application, database, and Nginx servers.
- Spearheaded deployments for both production and staging environments.
- Contributed to on-boarding new clients, configuring database instances, setting up VPC peering, and configuring Nginx for load balancing.
- Facilitated cross-team access to infrastructure for file transfer, data storage, PostgreSQL schemas, MongoDB, and more.
- Executed cloud cost optimization efforts, saving approximately 30K USD each sprint.

Teaching Assistant (Part time) — The LNM Institute of Information Technology Jaipur

From August 2019 to November 2019

- Instructed and mentored 3rd-semester students in Advanced Programming lab, focusing on Java programming and guiding them to enhance their object oriented programming skills.

Education

The LNM Institute of Information Technology, Jaipur

- B.Tech - CCE | 2017-2021
- CGPA - 7.95/10

Green Wood Public School, Gwalior

- Senior Secondary School
- Percentage - 88.6%

No.1 Air Force School, Gwalior

- High School
- CGPA - 9.8/10

Skills

Languages: Python, Java, C++, C, HTML/CSS

Technologies/Frameworks: Django, Node.js & Express (Basic), Redis, Celery, Bootstrap

Databases: MySQL, PostgreSQL, MongoDB (Basic)

Software: GIT, iTerm, Jenkins, Postman, Kibana (Elasticsearch)

Software Design and Development
AWS, Command-line interface
Data Structures and Algorithms
Object-Oriented Programming
Database Management System
Operating Systems
Computer Networks

Projects

News Extraction, Classification and Sytematic Retrieval

- Developed an unsupervised model that accurately predicts the category of news articles.
- Employed a four-way approach for sentence embeddings, incorporating tf-idf scores, LDA, Word2Vec extensions, and Doc2Vec techniques.
- Applied clustering algorithms, including K-means and GMM, to analyze the obtained clusters based on these embeddings.
- Evaluated the model's accuracy using labeled data for validation.
