EXPERIENCE

Data Analyst

Ciberspring

May 2024 - August 2024, Bengaluru, IN

- Managed data integration and validation for Johnson & Johnson in a remote setting, achieving a 35% increase in data quality and reducing processing time by 20%.
- Collaborated with cross-functional remote teams to develop actionable insights and streamline data processes, leading to a 25% increase in operational efficiency.
- Led a data modeling initiative, optimizing schema designs and ensuring seamless data integration across multiple sources, improving analysis speed by 30%.

Data Analyst

Capgemini Consultancy Services

October 2021 - March 2024, Bengaluru, IN

- Developed predictive analytics models for MG, enabling the forecasting of vehicle maintenance needs and reducing unexpected downtime by 15%.
- Implemented real-time data monitoring systems for MG, allowing for immediate detection of anomalies in manufacturing processes, improving overall production quality by 20%.

SKILLS

- Languages: SQL, Python, DAX(Data Analysis Expressions).
- Tools / Technologies: Microsoft Power BI, Tableau, Microsoft Azure Data factory, Data warehouse, Azure Data Lake, Looker Studio, MS Excel, Google sheets, Kanban, Jupyter Notebook.
- Data Analysis: Exploratory Data Analysis, Data Cleansing, Data Visualization, Data Reporting, Data Modeling, Microsoft Power Query.
- Data Manipulation: Power Query, DAX functions, M-Query, Pandas, NumPy.
- Experience with tools like ELT tools like Azure Databricks, Knowledge on ETL tools SSIS (SQL Server Integration Services).

PROJECTS

Johnson & Johnson

Ciberspring • May 2024 - August 2024

- Spearheaded a data integration initiative, utilizing Azure Databricks, ODBC, and SQL, improving data validation by 35% and cutting processing time by 20%.
- Developed detailed performance monitoring reports through Microsoft Log Analytics, enhancing system performance visibility by 30% and increasing security compliance awareness by 20%.
- Crafted tailored Power BI reports with complex DAX measures that provided actionable insights across three departments; streamlined tracking of key metrics led to faster identification of trends impacting business outcomes.
- Executed data cleaning processes with ELT tools, boosting data accuracy by 35%, ensuring actionable insights for critical business decisions.
- Implemented row-level security (RLS) using DAX for sensitive data across multiple departments, enhancing data privacy compliance by 20% and improving report accuracy.

MG

Capgemini Consultancy Services • October 2021 - March 2024

- Automated supply chain data processes by developing SQL stored procedures and triggers, resulting in a 30% reduction in query execution time and enhancing data integrity.
- Designed a comprehensive data model that integrated 8 large-scale tables across schemas, handling over 50 million rows, significantly improving reporting accuracy and timeliness.
- Designed and implemented interactive Power BI dashboards that monitored essential supply chain metrics, utilized by cross-functional teams and saving 320 hours annually, leading to more informed decision-making across departments.
- Innovated a multi-tier data cleansing framework, improving data consistency across manufacturing records by 25% and increasing operational throughput by 18%.

EDUCATION

Bachelor of Computer Engineering (2019)
