Summary

Experienced **Software Engineer** specializing in **building scalable cloud-based applications** using **Laravel PHP** and **React JS**. Proven expertise in **API integration** and developing secure, high-performance backend systems to optimize application performance. Expert in **Laravel, PHP, Magento, MySQL, HTML, CSS, JavaScript, React JS, Vue JS** and modern web technologies, with hands-on experience in building **RESTful APIs, API integration, Scalability, Unit Testing**, architecting **high-performance systems**, and optimizing application security. Adept at utilizing **Laravel's rich ecosystem** to create modular, **maintainable codebases** and **delivering solutions** that meet both technical and business needs. Skilled in collaborating with cross-functional teams to design and implement efficient, data-driven applications that support **business growth** and **innovation**.

Skills

Programming Languages: PHP, JavaScript, SQL, HTML, CSS

Libraries/Frameworks: Laravel, Magento, React JS, Vue JS, Express JS, RESTful APIs, DOM, HTTP

Database Technologies: MySQL, MongoDB

Cloud Platforms: AWS, Azure

DevOps Tools: Jenkins

Tools: GitHub, Visual Studio Code

Soft Skills: Leader, Team Management, Excellent Communicator, Strong analytical and problem-solving skills

Experience

Software Engineer | Cybercom Creation | Feb 2023 – Aug 2024

- **Optimized** server-side performance by **implementing efficient SQL queries** and **Reduced database load by 20%** through optimized **SQL queries**, improving system performance.
- **Designed and executed test cases** for **PHP applications**, identifying bugs and verifying fixes to uphold high-quality standards.
- Developed and integrated **RESTful APIs** for high-traffic web applications, ensuring **seamless data flow** between frontend and backend systems.
- Led the implementation of **CI/CD pipelines** for **Laravel** and **React JS** projects using **AWS** to enable automatic deployment and scaling in cloud environments.
- Wrote and developed new and **well-tested code** for different **software projects**.
- Developed new features and back-end components for high-traffic applications using **Laravel** and **Magento**.

Web Developer (Internship) | IconScout (acquired by LottieFiles) | June 2022 – Oct 2022

- **Managed project** and **web strategic** planning for the entire team.
- **Built reusable code** to utilize for other projects and to **minimize costs**.
- **Handled special projects** designated by senior developers, including tasks involving **HTML, CSS, JavaScript, and React JS**.
- **Implemented SEO strategies** to improve **website visibility** and **search engine rankings**.
- Designed a retail **recommendation system** using Popularity, Collaborative and Content-based filtering techniques.

Education

Computer Engineering - Bachelor of Engineering

2019 - 2023

Gujarat Technological University | CGPA: 7.83/10.00

H.S.C

2017 - 2019

Creative Science School • Rajkot, GJ | Percentile: 88.40

Projects

Project Title: Laravel PHP Web Application

The **Laravel PHP CRUD web application** is an **intuitive platform** designed for efficient **data management** through essential **Create, Read, Update, and Delete** operations. Leveraging the **Laravel framework**, it features **secure user authentication** and **role-based access control**. Users can easily create, view, update, and delete records, with **input validation** ensuring **data integrity**. Enhanced usability is achieved through **pagination** and **sorting functionalities**, while **RESTful API integration** allows external interactions. Built with **PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap**.

Technologies Stack:

- **Backend:** PHP, Laravel Framework
- **Frontend:** HTML, CSS, JavaScript, Bootstrap
- **Database:** MySQL
- **Version Control:** Git

Project Title: Guess My Number

"**Guess My Number**" is an interactive **web-based game** where players try to **guess** a **randomly generated number** within a set range. Built using **HTML, CSS, and JavaScript**, it offers a fun way to practice **core web development skills**. The game features **real-time feedback** on guesses, a **reset option** to start a new game, and **score tracking** to show the number of attempts. It's an excellent **beginner project** to improve understanding of **user interaction** and **basic game logic**.

Technology Stack:

- **HTML:** For creating the structure of the game interface.
- **CSS:** For styling the game and making it visually appealing.
- **JavaScript:** For implementing the **game logic** and interactivity.

Project Title: Roll Dice Game

The "**Roll Dice Game**" is a two-player **web-based game** where players compete to reach a **target score**, typically **100**. On each turn, players **roll two dice** and add the sum to their **round score**, but **rolling a 1** resets it to zero and passes the turn. Players can also "**Hold**" to add their round score to their **total** and switch turns. Built with **HTML, CSS, and JavaScript**, this project offers a fun way to enhance **web development skills**.

Accomplishments

Completing **cloud engineering track** and **data science & machine learning track** in **30 Days of Google Cloud Program 2021** [Click](#)

Reaching the **3rd Milestone** in **Google Cloud Facilitator program 2021** [Click](#)

Completing **learns** to earn **cloud security challenge 2021**

Certified by **code.org** platform for successfully completed **Pre-reader Express (2021)** course. [Click](#)
