About Me

Through the use of tried-and-true communication methods, a specialised software test engineer with experience in framework development collaborates with the customer to assure programme performance.

Skill

- Java Selenium
- TestNG
- BDD Cucumber
- Postman
- Rest Assured
- UX Testing
- Jenkins
- JIRA
- Maven
- GIT

Work Experience

Techdeva info tech Dec 2019 - Present

4+ years of experience as an expert software tester with knowledge of how to use programming to improve test cases. A focus on team growth in leadership, good interpersonal and communication skills, and all of these traits.

Professional Summary

- To execute Selenium tests and test suites on a variety of browsers, use Selenium Core and Web Driver. a thorough knowledge of **X-path construction and CSS selectors** to create site components.
- The continuous integration tool **Jenkins** knowledge.
- a deep familiarity with a variety of automation technologies, including **JUnit, TestNG, and Cucumber BDD**.
- Java Selenium WebDriver test scripts may be written to automate web applications.
- Cucumber feature files are used to create **BDD scripts**.
- The storage and extraction of source code occurs during **GIT** maintenance.
- working familiarity with **JIRA's** reporting and problem tracking features.
- full grasp of Rest Assured automation, Postman's GET, **POST, PUT, and DELETE methods, and JSON parser** validation.
- It is important to keep up with rituals like retrospectives, sprint reviews, and planning sprints.
- understanding of the **SDLC and the Agile-Scrum lifecycle**. the ability to execute simple SQL queries for data integrity checks on the back end.
- Good Experience in **API Testing using Rest Assured**.
- understanding how to perform tests on several browsers (Internet Explorer, Mozilla Firefox, and Google Chrome) sequentially and simultaneously, as well as how to analyse the results.

Description

Asos and Asos PRO are online platforms that provide low-cost package delivery services in Spain and around the world.

Skills

- ♦ Java Selenium
- ♦ BDD Cucumber
- ♦ Postman
- ♦ Rest Assured
- ♦ Jenkins
- ♦

Description

Pan African Limited, known simply as a Pan African. It is a, was a small private bank with its head office in Belgravia, London. It offered a bespoke service, with an emphasis on a personal relationship, to high-net-worth individuals. It is in the process of winding down its operations.

Skills

- ♦ Java Selenium
- ♦ TestNG
- ♦ Manual Testing

Project I - Asos

Domain : Ecommerce

2021 - Present

Professional Summary

- Use BDD to generate feature files and step definitions in Cucumber.
- Applications' stability and compatibility should be assessed using cross-browser testing and parallel execution.
- Attend all formal events, such as sprint review meetings, daily huddle calls, and sprint retrospective meetings. Participate actively in all of these events.
- To connect with both dynamic and static objects, Selenium needs XPath and DOM. The Selenium Framework was used to construct page objects, and incredibly trustworthy and effective Java code was generated.
- The agile/scrum methodologies are used for all project activities.
- attend understand more about business needs, go attend a meeting on business needs identification (BRI).
- participated in the GIT source code's push, pull, and merge operations.
- is responsible for doing functional testing utilising black box testing methods.
- in addition to JIRA, working experience of a variety of project, bug, and Scrum tracking programmes.
- a thorough knowledge of JSON parser validation, Postman's GET, POST, PUT, and DELETE methods, and Rest Assured automation.
- Using the TestNG framework and the Eclipse IDE, I created Java test code.
- Take part in the investigation of the problems that UAT has found.
- Check the reliability and compatibility of your app simultaneously across many browsers. Regression testing has been automated substantially using Jenkins.

Project II – Pan African

Domain : Banking

2019 - 2021

Professional Summary

- Jenkins' familiarity with continuous integration technologies.
- To execute Selenium tests and test suites on a variety of browsers, use Selenium Core and Web Driver. a thorough grasp of X-path construction and CSS selectors to design site components.
- Java Selenium WebDriver test scripts for web applications may be created.
- an in-depth familiarity with various automation frameworks, such as JUnit, TestNG.
- The storage and extraction of source code occurs during GIT maintenance.
- understanding of the SDLC and the Agile-Scrum lifecycle. Back-end data integrity checks may be carried by using straightforward SQL queries.
- Take part in official gatherings such as sprint planning, reviews, and retrospectives.
- Utilising the test case design methodology, create test cases for assertions.
- having the ability to assess the results of tests on several browsers (Internet Explorer, Mozilla Firefox, and Google Chrome), both sequentially and simultaneously.
- working familiarity with JIRA's reporting and problem-tracking features.
