PROFESSIONAL SUMMARY

Results-driven Machine Learning Engineer with 2+ years of experience specializing in Natural Language Processing (NLP), Deep Learning, and Computer Vision. Proficient in building end-to-end AI solutions using Python, PyTorch, and TensorFlow. Passionate about leveraging cutting-edge AI technologies to solve real-world problems and deliver impactful results. Seeking to contribute to innovative projects in NLP, Machine Learning, and Computer Vision as an NLP Developer, Machine Learning Engineer, or Data Scientist..

Education

- SRM Institute of Science and Technology, Kattankulathur**
Master in Artificial Intelligence, Computer Science Engineering
◦ CGPA: 8.5/10

SRM Institute of Science and Technology, Kattankulathur
Bachelor of Technology, Mechanical Engineering
◦ CGPA: 6.7/10
- 2023-2025

2018-2022

Experience

- AI/ML Engineer**
Freelancing, Virtual

Oct 2022 – Dec 2024
- Developed and deployed 20+ machine learning models with seamless API integration, enhancing client workflows and improving efficiency.
 - Improved model accuracy by 20 percent through optimized pipelines using PyTorch and TensorFlow
 - Implemented LLM model distillation, reducing computational costs by 40 percent while maintaining high accuracy.
 - Designed scalable NLP pipelines using retrieval-augmented generation (RAG), transformers, and multimodal learning, improving precision in AI-driven insights.
 - Delivered AI-driven solutions for 10+ clients, including NLP-based chatbots, sentiment analysis systems, and computer vision models.
 - Recognized for delivering innovative and reliable AI solutions that met client requirements and exceeded expectations.

Projects

- RAG QA Chatbot with Llama 2 and Pinecone**

github.com/SAINARHARI/RAG_QA_PINE
- Built a question-answering bot using RAG (Retrieval-Augmented Generation) architecture, leveraging Llama 2 for embeddings and text generation, and Pinecone DB for context storage and retrieval.
 - Enhanced retrieval accuracy and response precision using LLM distillation techniques for efficient inference.
 - Improved precision by 15 percent through optimized retrieval strategies and fine-tuned transformer models.

Chatbot for SQL Query Generation

github.com/SAINARHARI/SQL-AGENT 

- Developed an NLP-based chatbot using OpenAI's GPT API to generate SQL queries from natural language input.
- Applied model compression techniques to improve response speed and reduce latency.
- Built with Python (Flask), SQLAlchemy, and SpaCy for intent recognition, enabling non-technical users to interact with databases seamlessly.

AI Conversational Chatbot

github.com/SAINARHARI/ai-conversational-chat-bot 

- Built and deployed an NLP model using deep learning and transformer-based architectures to process incoming messages and generate responses.
- Integrated the chatbot with Twilio for handling incoming and outgoing messages, enabling seamless communication.
- Implemented distillation-based fine-tuning, reducing model size by 35 percent while preserving response quality

Sentiment Analysis for Customer Reviews

github.com/SAINARHARI/E-commerce-sentimental-analysis 

- Built an NLP model to classify sentiments from product reviews, achieving 88 percent accuracy and enabling better customer feedback analysis

Non-Compete Clause Extraction (NER Model)

github.com/SAINARHARI/NONCOMPETE-CLAUSE-EXTRACTION 

- Developed an NER-based model to extract and highlight non-compete clauses from employment contracts with 98 accuracy.
- Automated clause classification and summarization to identify restricted activities efficiently.

Steel Microstructure Classification Using Deep Learning And Transfer-Learning

<https://github.com/SAINARHARI/steel-microstructure-classification> 

- Developed a comprehensive analysis pipeline for steel microstructures leveraging deep learning and traditional computer vision methods.
- Utilized techniques such as phase distribution analysis to quantify pearlite and ferrite proportions, edge detection for granularity measurement, and spatial phase quantification.
- Combined ResNet-based transfer learning with advanced image processing to automate feature extraction and classification, achieving improved accuracy in microstructure characterization.

QSAR Project: Unsupervised Clustering of Chemical Compounds

<https://github.com/SAINARHARI/QSAR-UNSUPERVISED-CLUSTERING> 

- Applied unsupervised learning algorithms (K-means, DBSCAN, hierarchical clustering) to cluster chemical compounds for QSAR analysis..

SKILLS

Languages: Python, Java, Objective-C, SQL, JavaScript

Machine Learning Frameworks: PyTorch, TensorFlow, Scikit-learn, Keras

NLP Tools: SpaCy, NLTK, Hugging Face Transformers, GPT, BERT, Llama

Advanced AI Techniques: Scaling LLMs, Model Distillation, Precision Improvement in AI Models

Computer Vision: OpenCV, YOLO, ResNet, VGG

Data Visualization: Tableau, Matplotlib, Seaborn

Big Data Distributed Computing: Skilled in Hadoop (HDFS, federation, incremental imports), Spark (PySpark ML, Streaming, SQL, MLlib), ETL (MapReduce, Flume, Sqoop), real-time streaming (Kafka, KSQL, Azure Databricks)

Cloud Platforms: AWS, Google Cloud Platform (GCP)

Databases: Pinecone, SQLAlchemy, MySQL

Other Tools: Flask, Docker, Git, Jupyter Notebook
