## TECHNICAL SKILLS

PHP (Core PHP, Laravel, CodeIgniter)

APACHE, NGINX

MySQL, MariaDB

RESTful Architecture

HTML, CSS, Bootstrap

React JS, JavaScript, jQuery, AJAX, Chart JS

AWS (EC2, S3, RDS, IAM, SNS, SES)

## CORE COMPETENCIES

Agile Methodologies

Scrum

LAMP Stack

Web Development

Team Building & Leadership

Technical Lead & Architect

Risk Management

## ROLES & RESPONSIBILITIES

- Working closely with Managers to conceptualize, develop, and deliver products / projects by gathering functional requirements and translating them into elegant, practical solutions.
- Collaborating closely with Development Teams to enhance release consistency and optimize timing.
- Conducting code review, testing, and maintenance of applications and databases to ensure strong optimization and functionality.
- Manage large, complex products / projects.
- Collaborating with Front-End & Back-End Teams to build interfaces focused on usability, user experience, engaging, device specific, etc

## PROJECTS

**Product Name:** SRECTRADE

**Period:** Jul 23 – Oct 24

**Technology Stack:** PHP, CodeIgniter, JavaScript, jQuery, AmCharts, HTML5, Bootstrap, MySQL, Docker, Kubernetes, AWS (RDS, EC2, S3), Microservices, ReactJS

**Description:** SRECTrade appears to be a platform related to trading or managing Solar Renewable Energy Certificates (SRECs). These certificates are a market-based instrument that represents the environmental benefits of generating one megawatt-hour (MWh) of electricity from solar energy. SRECs are part of various renewable portfolio standards (RPS) that require utilities to procure a certain percentage of their energy from renewable sources.

**Product Name:** API Monetization

**Period:** Apr'22 – June'23

**Technology Stack:** PHP, Laravel, JavaScript, jQuery, HTML5, Bootstrap, MariaDB, Docker

**Description:** The REST API endpoints will provide access to details associated with a specified mobile number, including credit score, SIM swap status, active status, roaming information, and more, through API monetization. These endpoints are accessible to onboarded project partners, and all usage can be monitored and managed via the backend dashboard.

**Product Name:** Salesforce Visualization

**Period:** Dec'21 – June'23

**Technology Stack:** PHP, Laravel, HTML5, Bootstrap, ReactJS, MariaDB, Docker

**Description:** The project includes a Salesforce Visualization application that provides a hierarchical dashboard for all employees. This dashboard displays each employee's KPI performance, allowing top management to drill down to individual employees to assess their performance.

**Product Name:** SmartInsight

**Period:** Aug'20 – June'23

**Technology Stack:** Core PHP, JavaScript, jQuery, HTML5, Bootstrap, MariaDB Client, Docker

**Description:** SmartInsight is a network monitoring platform that provides a comprehensive interface to monitor and manage network devices. osTicket is an open-source helpdesk and ticketing system that streamlines customer support operations. Integrating SmartInsight with osTicket aims to create a unified system for network monitoring and issue tracking.

**Project Name:** Ultraplanner

**Period:** May 2019 – June 2020

**Technology Stack:** PHP, JavaScript, jQuery, HTML5, Bootstrap, DynamoDB

**Description:** Ultraplanner is an advanced, cloud-based ERP solution that enhances efficiency across various business processes. It facilitates seamless procurement, optimizes inventory management, supports financial planning, strengthens customer and vendor relationships, and enables efficient handling of digitized documents.
