

Profile:

- ☐ Azure Data Engineer having good Experience and understanding of distribution file systems of Big Data and its Ecosystems (Azure Data factory, Azure data lake storage).

Experience Summary :

- Overall 3+ years of strong experience in Software Development using SQL & Azure Cloud technologies.
- Hands on experience on Azure Data Factory V2
- Hands on experience on Creating ADF Pipeline for Full Load and Incremental Load
- Hands on experience on Creating the linked services for the different services
- Hands on experience on Creating the datasets for the different sources.
- Hands on experience on installing the self-hosted Integration runtime to migrate data from on premise to cloud.
- Hands on experience in designing and developing scripts for custom ETL processes and automation in Azure data factory, Azure data bricks, Python, Pyspark.
- Hands on experience on sharing the Integration runtime between the ADFs.
- Hands on experience on Azure Synapse Analytics
- Hands on experience on creating the dynamic pipelines.
- Processed flat files in various file formats CSV, Parquet and Json etc.
- Installed Self hosted IR in on premise machine and created the connection from ADF.
- Created Azure Data Factory V2 Linked Services to connect to different sources like on premise SQL server, blob storage and SQL Data warehouse.
- Created the dynamic pipelines to copy multiple tables using dynamic parameters
- Attending the spring retrospect meetings to review the sprint flaws and improvements.
- Having good working experience of Storage like Azure Data Lake Storage and Blob Storage.
- Developed various spark applications to perform ETL workloads on terabytes of data.
- Familiar with Data Ingestion pipeline design and advanced data processing tools.
- Experienced in version control and source code management tools like GIT
- Experience with relational databases such as MySQL and SQL Serve
- Good experience with Azure cloud technologies says Azure SQL Database, Azure Blob Storage, Azure functions, Key vault.

Technical Skills:

Languages	SQL
Cloud Technologies	Azure Data Factory V2, Azure Data Lake Storage, Azure Databricks, Power Bi, Pyspark, Snowflake.
Database/ RDBMS	MS-SQL server, Azure SQL Database
Operating Systems	Windows
Version Control	Azure GIT
Database Query Tools	SSMS, Storage Explorer

Work Experience:

- Currently working with APPLITECH SOLUTION PRIVATE LIMITED, Bengaluru as Software Engineer from June 2021 to Till Date.

Academic Profile:

- Completed Graduation (B Tech Civil Engineering) from G. Pulla Reddy Engineering College. 2021

Project Details:

Project #1:

Project Name	Brilliant EXAMS – EMS
Location	Bengaluru
Organization	APPLITECH SOLUTION PRIVATE LIMITED
Project Description	Brilliant EXAMS, the Examination Management System, is the benchmark in new-age education delivery systems and set the knowledge revolution in motion. It leverages the power of technology and facilitates the conduct of fool-proof examination, reduce turn-around time, enhance accuracy of evaluation and manage vast amounts of data in a distributed environment. The Examination Management System (EMS) has a simple and easy to use web-based centralized user interface and a well-defined database - centric schema for storing, retrieving, managing and aggregating examination objects. The question papers are delivered in a highly secured manner with 128-bit encryption technology. Effective reports are generated to know

	the details about examinations conducted, examination centre details, fee details, candidate details, cost and budget details, etc. The system is robust enough to handle large amount of data. Also the system is equipped with proper back up disaster recovery plan. The system can be deployed in universities, large corporate, banks, etc., for online examinations, mass recruitment and for skills up gradation tests. Subject Areas : EMS Web Application QPDS Hall-ticket Module Examination Result Publication
--	---

Software	Operating System	Windows XP
	Languages	Microsoft SQL 2005,2008R2
	Database	Microsoft SQL 2008/ORACLE 10G
	Software Model	Iterative
Responsibilities	• Taking care of the Database design and implementation. • Involved in Normalization and De- Normalization of existing tables for faster query retrieval. • Advised optimization of queries by looking at Execution Plan for better tuning of the database • Experienced in writing complex SQL Queries, Stored Procedures, Triggers, Views, Cursors, Joins, Constraints, DDL, DML and User Defined Functions to implement the business logic and also created clustered and non-clustered indexes. • Implementation and maintenance of database security. • Conducted defect review meeting on daily basis to prioritize the defects • Adhered to the development time line, coding standard, processes & methodologies as mentioned in the project plan.	

Project #2:

Project Title : Big Data Shared Services

Client : John Hancock Financial Services

Role : Azure Data Factory Developer.

Methodology : Agile (Scrum)

Environment : Azure Data Factory V2, Azure Blob Storage, ADLSGen2.

Roles & Responsibilities:

- Attending the DSM (Daily Standup Meetings) to update the task status
- Installed Self hosted IR in on premise machine and created the connection from ADF
- Created Azure Data Factory V2 Linked Services to connect to different sources like on premise sql server, blob storage and SQL Data warehouse.
- Created the azure data factory V2 pipelines for daily, weekly and monthly full load
- Created the azure data factory V2 pipelines for daily, weekly and monthly Incremental load.
- Created triggers in azure data factory V2 to run pipelines on scheduled time
- Created the stored procedure to updated the audit logs of the ADF V2 copy activity
- Created the dynamic pipelines to copy multiple tables using dynamic parameters
- Attending the spring retrospect meetings to review the sprint flaws and improvements.

Declaration:

I hereby declare that the information furnished above is true to the best of my knowledge.
