- Configuring VPC Networks, appropriate firewalls to enable access to users, and creating VPNs. Configuring HTTP(s), Network, and SSL (TCP) load balancers for HA (High Availability) for business-critical applications using SSL Certificates
- Creating users and providing appropriate privileges using Identity and Access Management (IAM)
- Implementing CDN (Content Delivery Network) for faster website access to the end-users based on the geographical access pattern.
- Involving in requirement gathering and technical feasibility study and POCs

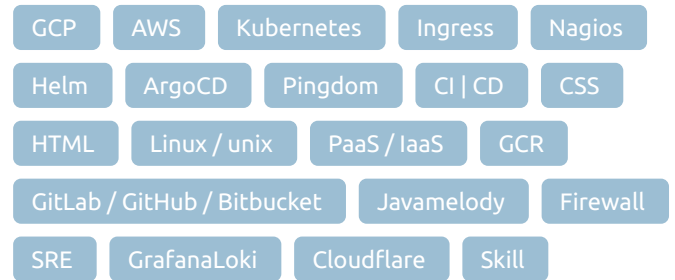

EDUCATION

Bachelor of Engineering

ATMECE | Mysore

05/2016 - 12/2020

SKILLS

PERSONAL PROJECTS

Automated Log Management: Streamline your operational efficiency with automated log cleanup and production tag rollout. This project automates Solr log maintenance, ensuring efficient log storage while also implementing a robust tagging system for better log categorization and troubleshooting. Enhance security, reduce operational costs, and boost system reliability with this comprehensive solution.

Custom GCP Billing Dashboard: Create a tailored billing dashboard for your Google Cloud Platform (GCP) account to efficiently manage and monitor your cloud expenses. This project will guide you through the process of setting up billing data export, designing an intuitive dashboard, and connecting it to your GCP billing data in BigQuery. By the end of this project, you'll have a powerful tool at your disposal to track usage trends, identify cost-saving opportunities, and ensure cost efficiency in your GCP infrastructure.
