Top Skills

C++ 11 and above
C (Programming Language)
Linux

Languages

Gujarati (Native or Bilingual)
English (Professional Working)

Certifications

Advanced Driver Assistance
Systems (ADAS)
Embedded Software Developer

Malaviya Twinkal K.

C/C++ Developer | ADAS/AD | Virtual Simulation
Bengaluru, Karnataka, India

Summary

With 10 years of experience in the automotive industry, I have developed strong skills in creating, testing, and deploying software solutions specifically for this field. As a Senior Software Engineer at Aptiv, I utilize C and C++ (including modern C++ standards such as C++11 and C++14) to develop Windows/Linux based radar simulation applications. My skills include CMake for build management, GTest for unit testing, UDP protocol for communication, Object-Oriented Programming (OOP), and STL concepts.

I use my analytical skills to enhance the performance and stability of automotive software. I work closely with engineers and stakeholders, following agile practices and using tools like Jira, Jenkins, and Visual Studio Code.

Additionally, I hold certifications in Embedded Systems and ADAS (Advanced Driver Assistance Systems).

Experience

Aptiv

Senior Software Engineer

January 2019 - Present (5 years 8 months)

Bengaluru, Karnataka, India

Simulation Software development (Windows/Linux based application) for 5th Generation Short Range Radar.

1. Key Member of HILRESIM Windows framework team of Radar Platform Software.
2. Updated and improved old C++ code to work with new components and modern C++ features (C++11, C++14) for better robustness and maintainability.
3. Understanding of requirements, Implementation of functionalities for radar data logging and re-simulation using UDP protocol.

KPIT

Senior Software Engineer

June 2017 - January 2019 (1 year 8 months)

Bengaluru Area, India

1. Having experience in auto code generation using MATLAB, Simulink and also involved in MIL and SIL of controller modules.
2. Debugged and resolved many model and coding issues during the software development phase.

Performed Polyspace & MISRA C and C++ standards analysis on the generated controller module code to ensure code safety.

3. Performing model and code reviews across the team to ensure the quality product delivery.
4. Involved in Root Cause Analysis of the model and code defects.

Tata Elxsi

Software Developer

February 2016 - June 2017 (1 year 5 months)

Bangalore

AUTOSAR 4.2.1 BSW(LIN Stack) Development.

My responsibilities include

1. Migration of AUTOSAR Lin Stack(LinIf, LinSM and LinTp) version 3.1.1 to 4.2.1
2. Development of Embedded Code and Functional testing.
3. Design of BSW (AUTOSAR) Modules API base on AUTOSAR standard releases 4.2

TronicsZone - Electronic Design & PCB Design

Design Engineer

June 2014 - February 2016 (1 year 9 months)

1. Firmware Developer in the Embedded systems (medical electronics).
2. Programming skills on Embedded C .
3. Experience of different microcontrollers based development (application & Bootloader)

Education

IETE

B.Tech, Electronics and Communications Engineering · (2009 - 2013)
