OBJECTIVE

Recent graduate with a master's degree in Cloud Computing, seeking entry level role in cloud domain, has completed hands-on projects in AWS and Terraform. Eager to work in a professional environment to deliver the best, grow professionally and cater to organizational needs by putting my knowledge into mainstream IT needs.

EXPERIENCE

LabCorp Drug Development Ltd, Bengaluru, India

Sep 2023 – Present

Assistant Data Programmer

Project: - DT4 | **Technologies Used:** - Python, SQL, Docker,

As an Assistant Data Programmer at LabCorp, I play pivotal role in ensuring the integrity and efficiency of our healthcare data processes.

My Responsibilities include:-

- Collect, organize, and manage data from various sponsor sources, ensuring compliance with industry regulations and standards.
- Optimize queries and database function for better performance and efficiency.
- Working closely with cross-functional team to understand data requirements and provide data for data-drive decision-making.
- Perform routine updates and maintenance tasks on healthcare database, ensuring data is updated and accessible to support clinical and operational needs.

Shell India Markets Private Ltd, Bengaluru, India

Aug 2022 – Aug 2023

Software Engineer

Project: - IoT DLM@SHELL | **Technologies Used:** - Python, PostgreSQL, Flask, Docker, Azure IoT.

The main objective is to develop a Device Life cycle Management(DLM) portal to manage IoT devices using Azure IoT Cloud Services. The System will enable efficient management of IoT Devices throughout their entire life cycle, from provisioning and configuration to retirement.

- Worked in Agile Methodology for development and testing to handle the issues.
- Collaborated with the team of engineers to identify requirements and developed REST based APIs for various microservices of IoT DLM Project.
- Developed and optimized database functions, procedures, and SQL queries.
- Participated in code reviews and contributed to the development of best practices and coding standards within team.
- Performed simulation of an IoT Device using in-house docker simulator.

TECHNICAL SKILLS

Languages: Python, CPP, SQL, HCL (Hashicorp Configuration Language).

AWS Services: Amazon EC2, S3, Route53, IAM, RDS, VPC,CDN.

DevOps Tools: Git, Docker, Kubernetes, Terraform, Ansible.

Development Tools: Git, VS code, Spyder, Jupyter Notebook.

Methodologies: Agile Methodology, SDLC, REST API Development, Back-End Development.

EDUCATION

- **Master of Engineering** (Cloud Computing)

Manipal School of Information Sciences| M.A.H.E Manipal | CGPA - 9.44

Aug 2021 – Aug 2023

- **Bachelor of Engineering** (Computer Science and Engineering)

K.V.G College of Engineering |V.T.U Belagavi | CGPA – 7.53

Aug 2017 – July 2021

ACADEMIC PROJECTS

Monitoring Container Resource Utilization for Remediation using Kubernetes

Aug 2021 – May 2022

Technologies used:- Docker, Kubernetes, Grafana, Prometheus.

The objective is to develop the script that would look at the past container resource utilization and raise requests in the form of Kubernetes events, if these requests are found to be true then trigger auto remediation process that will increase the container resources.

Responsibilities:-

- Setting up Docker environment and containerize a basic php website.
- Setting up Kubernetes Master-Slave cluster.
- Orchestration of Container (Containerized PHP Website) to Kubernetes Cluster.
- Setting Up Prometheus and Grafana.
- Writing YAML Scripts for the CPU and memory usage limit and for the remediation process.

Classification of Areca-Nut Using ML Approaches

Aug 2020 – June 2021

Technologies used:- Python, Jupyter Notebook, OpenCV, SVM Algorithm.

The main objective is to classify the Areca-Nut into correct class. Initially we created our own dataset consisting of 1600 images of five different classes. Segmented the images using OpenCV-Python for further processing. Trained our classifier Machine Learning model using 80 Percent of dataset and SVM algorithm. And we used remaining 20 percent of dataset for Testing the trained model.

Responsibilities:-

- Capturing of Areca-Nut images for the project purpose.
- Creation of Areca-Nut Dataset (images), which is used for training classifier model and testing the accuracy of classifier.
- Created the web front-end using HTML, CSS, for the end-user and integrated the classifier model so that user can add Areca-Nut image from UI and able to classify the Areca-Nut in Realtime.

PERSONAL PORTFOLIO PROJECTS

1. Deployment of Static Website using AWS S3, Route53 and CDN

The main objective of this project is to deploy the static website in Amazon S3, using CloudFront and Route53 we will route the traffic toward the S3 bucket where website files are residing. The above-mentioned AWS Services are powerful combination that ensures high availability, global distribution, and security.

2. Deployment of Highly Available and Highly Scalable Website in Multi-AZ Environment.

The main objective of this project is to deploy the Website in highly available, easily scalable whenever required using AWS Services. Deployed the websites within a VPC that includes both public and private subnets, to provide secure and scalable network connectivity. I created two EC2 web server for website deployment in different AZ in the same region for high availability, used Amazon RDS in private subnet as backend database, managed network traffic using Application Load balancer. Used Auto Scaling to scale the infrastructure whenever required used CloudFront for CDN.

3. Crating of Highly Available and Simple Infrastructure for deploying website using Terraform.

The main objective of this project is to is to create a highly available infrastructure for deploying websites. I used HashiCorp Configuration Language to create terraform scripts, to create the infrastructure.

Services used to create the infrastructure are :- AWS VPC, EC2, Application Load Balancer.

CERTIFICATES

1. AWS Academy Graduate digital badge on completing “AWS Academy Cloud Foundations” Course.
2. “AWS Fundamentals” Specialization offered by Amazon Web Services on Coursera.
3. “Python For Everybody” certification on Python offered by University of Michigan and Coursera.

DOMAIN INTERESTS

Cloud Computing, AWS, DevOps, Infrastructure as Code.

LANGUAGES

English, Kannada, Hindi.

I hereby declare that the information furnished above is true to the best of my knowledge.
