GEN AI DEVELOPER

Gen AI Developer and Freelancer with 10 months of experience, having contributed to innovative AI projects at Involead and Style by Vida. I have worked on confidential projects, developing AI-driven solutions in diverse sectors with a focus on Generative AI, Computer Vision, and NLP. I have a track record of delivering AI-driven solutions in data specific , fashion and marketing . My work has focused on creating advanced systems such as DOX Gen AI , Virtual-Try-On , AI-powered stylists, and other impactful applications. Now working as a freelancer, I continue to provide tailored AI solutions to clients, leveraging my expertise to solve complex challenges and deliver business value.

TECHNICAL SKILLS

**Languages :** Python, SQL,Java  
**Frameworks :** LangChain, LlamaIndex ,Tensor Flow, HuggingFace Transformers , Flask .  
**Key Skills** Prompt Engineering,Natural Language Processing,Computer Vision,FineTuning, Image Generation , Color Analysis, UI/UX, Data Engineering, AWS Cloud, Git/Github ,Pyspark, Data Structure and Algorithms, Deep Learning,Machine Learning .  
**Tools :** Figma , Docker ,Groq , Data bricks , Hugging face , Ollama , LM studio, Together ai , Redshift , Runway Gen 3 ,Vector Databases(Pinecone, chroma, Faiss,Neo4j) , MongoDB.

EXPERIENCE

**Gen AI Developer Intern | Involead** December 2023 –June 2024  
– As a Generative AI Developer Intern, I contributed to various data-driven projects, many of which required maintaining strict confidentiality. My role primarily involved working on advanced AI solutions, handling sensitive data, and ensuring privacy while delivering impactful results.

**AI Developer Intern | Freelancer | Style BY Vida** August 2024–Present  
– During my internship and freelance work, I had the opportunity to contribute to innovative projects such as AI Stylist, Virtual Try-On, AI Jewelry, and Video Content Generation. I leveraged my expertise in Generative AI, Computer Vision, and related technologies to deliver cutting-edge solutions in the fashion and creative industries.

EDUCATION

|                           |                                                       |           |

PROJECTS

**Project 1 | Marketing AI** 4 weeks  
– Leveraged LLMs and Diffusion models to create content for marketing campaigns based on trends and events.  
– Content includes blogs, newsletters, one-liners, slogans, posters, images, articles, and captions. The innovation was combining posters with generated images and text.  
– Implemented computer vision, image and color analysis, NLP, LangChain, UI/UX skills, Ollama, Together AI, PyTrends, Google News API, Llama 3.1, LLava, DALL-E 3, and Flux Schnell.

**Project 2 | DOX Gen AI** 4 months  
– A RAG Chatbot is equipped with capabilities for query search, page-wise summarization, contract summarization, definition extraction, image captioning, and more.  
– Technology used in the project (RAG, Tesseract OCR, image captioning, image analysis, title declaration, notes management).

**Project 3 | AI Stylist(Chatbot)** 6 weeks  
– A personalized shopping chatbot that offers suggestions and personalized products on various fashion trends.  
– Implemented an automated process for extracting and applying JSON rules, with four levels of annotation to ensure accuracy.  
– Led the implementation of multi-agent RAG technology, incorporating computer vision, NLP, metadata filtering, pinecone,Gemini pro ,llava,Blip,color analysis, and image analysis to enhance project capabilities.

**Project 4 | Virtual Try ON** 3 weeks  
– Replaced closed-source models, libraries, and GitHub repositories with open-source ones. -Replaced OpenPose with MediaPipe, Gemini with LLava, and DensePose with Detectron.  
– worked on Image captioning and tagging part.  
– Integrated Try On with another project where video content using Runway Gen 3 was generated.

**Project 5 | AI Jewellery Designer** 2 days  
– Streamlit application that creates images of rings, pendants, and earrings with click-based user inputs.  
– Has capabilities for Image-to-Image, Text-to-Image, and Description Generator.  
– Used Flux dev, Runway Gen 3, Dalle3, Llava ,Prompt Enginerring,Streamlit.

**Project 6 | Trending news application** 3 days  
– In this project ,when a user clicks on a news article, they receive an AI-generated image along with a concise and easily readable summary generated by a large language model (LLM).  
– Used Google News API, Pytrends, Flux Schnell,Dalle3,Gemma, NLP .
