Dedicated and results-driven Software Engineer with over 5 years of experience in Embedded Software Development. Seeking to leverage technical expertise and leadership experience to contribute effectively in a challenging role within a dynamic organization.

SKILL SET

Languages & Frameworks: C++, Data Structures, OOPs, Design Patterns (FDP, Singleton), Design Principles, Multithreading, FIDL, D-Bus, Proto Buff.

Tools & Platforms: Eclipse, NICE, DLT Viewer, Sublime, Mocca, PCAN Tool, BUS Master, VS Code, Git & GitHub, Linux.

Embedded Systems: Firmware Development, Debugging, Real-time System.

EMPLOYMENT PROFILE

Company Name : Harman International, Bangalore

Associate Engineer: March 2019 to 2022

SW Engineer 1: 2022 to Present

KEY PROJECTS HANDLED

Battery Electric Vehicle[BEV] CR

Role: Leading the CR, Functional Owner with Software Development

Description :

The current system does not offer access to available EV charging stations. As per customer request and requirements discussed, it has been requested to provide access to both online and offline charging stations. An estimation for the Change Request (CR) has been provided. Currently, work is underway on this CR. Online data will be sourced from the backend via the ECS module. Data will then be transmitted to the HMI based on user requests.

Smart Route Planning[SRP] CR

Role: Functional Owner with Software Development

Description : The current system does not support smart route planning. Smart route planning involves sending route information from the backend (online) to the navigation system. Route matching must be conducted to determine if the system can provide guidance. If the route is navigable, this information should be sent to the backend, initiating the guidance process. If the route is not navigable, the system should provide the modified route to the backend. Upon confirmation from the backend, the system should be able to guide this modified route.

Route Parameterized CR for TSI

Role: Functional Owner with Software Development

Description: This CR is for route transfer feature, currently parameters like length, distance and resolution was read from json file and it's fixed. According to this CR these values should be parameterizable as per customer requested values without performance loss.

Traffic Sign information for Truck and Coach

Role: Functional Owner with Software Development.

Description: Traffic sign information for the vehicle data for the Truck, here vehicle information like speed, height, weight data is read from WAI and provided the data for the CVM module.

Transmitted based on fusion algorithm applied in CVM the restriction related vehicle is displayed on cluster.

Responsibility:

Vehicle information like height, weight, length etc data will be read from WAI and send those information CVM module through CAN module.

Infotainment System for MAN Truck Maintenance[MAN_SCANIA TRUCK]

Role: Functional Owner with Software Development.

Description: Infotainment system for the Truck, it contains Navigation, Cluster Interaction for Media and navigation etc.

Responsibility:

1. Restriction warning development[Weight, Height Length etc]
2. Navi Guidance like Turn by Turn along with side street information send to HMI.
3. Lane Information like recommended line, Interrupted or solid line info etc sent to HMI.
4. Upcoming junction view, Intersection view with and without lane information data sent to HMI
5. Restriction warning icon display information on top priority-based information sent to HMI.
6. Vehicle Profile Management[Weight, Length, Height etc].
7. Route transfer/ECS routing : Route information will be sent from backend team, from controller will request to engine to calculate a route and calculated route will be sent to backend.

ACADEMIC CREDENTIAL
