
MITHUN B

Bengaluru,KA | 8660615371 | mithunbnaik06@gmail.com | [Linkedin](#)

Summary

Passionate and skilled Android Developer with hands-on experience in building intuitive and feature-rich mobile applications. A reliable team player with a focus on delivering high-quality code and seamless user experiences, I thrive in challenging environments that foster creativity and innovation. Eager to contribute to dynamic teams and help drive the success of impactful projects.

Skills

Programming Languages: Java, Kotlin, C

Databases: MySQL, SQLite

ORM tools: Room

Operating Systems: Windows, Android

IDE: Eclipse, Android Studio, Visual Studio Code

Android Framework and Libraries: React native, Retrofit, LiveData, Flow, Coroutines, Hilt, Data Binding, Jetpack Compose, Data Binding

Application Framework: Spring Boot

Experience

Software Engineer

06/2023 to Current

Snapbizz Cloudtech PVT LTD

Bengaluru KA

Contributed to the development of the **Snapturbo application**, available on the Play Store.

- Implemented UI, new features and resolved bugs to enhance the functionality and user experience of the application.
- Migrated codebase from **Java** to **Kotlin**, **XML** to **Jetpack Compose**, improving overall efficiency and maintainability.
- Handled data entries, with **CRUD operations** and created simple yet complex Queries.
- Gained hands-on experience with **React Native**, **Retrofit**, and **Room Database** technologies.
- Executed **database migration** tasks for seamless data management.
- Conducted code optimization to enhance performance and scalability
- Developed features like **Push Offers**, different types of **Reports** like Sales Summary report, Brand and Company wise report , **Prints** of Bills.
- Implemented **Spring Boot Kafka** on backend to facilitate logging functionalities.
- Developed **RESTful APIs** using **Spring Boot**, **Java** and **Hibernate**.

HAL

Bengaluru KA

- Served as an intern at HAL Division MCSRDC, Bengaluru, as part of the Software Design Group.
 - Updated **C++** software code according to the Avionics ICD and Code of Practice guidelines.
 - Gained hands-on experience with **LDRA** testing tools.
 - Created **UML** designs, including Class Diagrams, Sequence Diagrams, and Use Case Diagrams.
 - Familiarized with various stages of SDLC and software development models.
-

Projects

1. Shortest Round-Trip Predictor

A web application developed to predict the mini cost of a round trip in India, designed primarily to help truckers or travelers who want to minimize the expenses and time.

Technology used: Python, Django, HTML, CSS, Bootstrap

2. Insect Detection in Agricultural Context using Deep Learning

Empowering agriculture with cutting-edge technology, our project utilizes deep learning, particularly convolutional neural networks, for efficient insect detection. Enhancing accuracy and real-time monitoring, it revolutionizes pest management for sustainable and resilient farming practices.

Technology used: Python, MySQL, HTML, CSS

Education

Bachelors In Computer Science Engineering

2019 - 2023

CMR Institute of Technology, Bengaluru
