SUMMARY

Passionate Software Engineer with over 2 years+ of experience in crafting dynamic web applications and robust backend systems. Adept at writing clean, maintainable code that drives efficiency and performance. Experienced in collaborating with diverse teams across multiple projects, delivering high-quality solutions on time. Versatile and adaptable, capable of thriving in both remote and in-office environments. Eager to contribute to innovative projects and drive success in a fast-paced, technology-driven world.

EXPERIENCE

Full Stack Developer

Fly Designs Studio

09/2023 - Present Remote

- Created a RESTful API that allowed for easy integration with third-party services.
- Optimized database queries to improve system performance.
- Designed and implemented a feature-rich AI image editor capable of performing text-to-image generation, image-to-image transformation, and face swapping.
- Created a user-friendly design editor with drag-and-drop functionality, customizable templates, and real-time editing tools, mirroring the capabilities of popular design platforms like Canva.
- Seamlessly integrated external image generation APIs to provide users with high-quality, AI-generated images based on text prompts and user inputs.
- Utilized AJAX and RESTful APIs to facilitate asynchronous interactions between the frontend and backend, including image generation, editing operations, and real-time updates.
- Created a system to display different features and options in the dashboard based on user roles (admin or user), enhancing the application's flexibility and security.

Project name	Description
AI Image Builder	Developed an AI Image Builder using HTML, CSS, and JavaScript for the frontend, and Laravel for the backend. The system features admin and assistant panels, with integrations of third-party APIs for advanced functionalities like text-to-image generation, image-to-image transformation, and face swap. A subscription system was implemented to offer different feature access based on user plans, along with secure payment integration. This project provides a comprehensive platform for creating AI-generated images with dynamic user control and feature flexibility.
MagicBuilder	MagicBuilder is a canvas-like platform built with Laravel and AJAX, allowing users to select predefined templates and modify them as needed. The system provides a flexible interface for customizing design elements, offering a dynamic and intuitive user experience. Users can edit text, images, and other visual elements on templates, making it a powerful tool for creating personalized designs efficiently.

SKILLS

Html	CSS	JavaScript	PHP	Laravel
React Js	Node Js	Express Js	MongoDB	
MySQL	C	C++	OOPS	Git
API Development		Jquery	Data Structure & Algo.	
Networking		Computer Networks	TCP/IP	UDP
Routing	Switching	Basic of AZ-900		
Basics of cloud computing			Basic of AWS	
Visual Studio	Linux	Windows	MacOS	

CERTIFICATION

Cyber Security

MeitY, Govt of India.

Web Development

CodeStreak Technology.

AWS Cloud Practitioner Essentials

AWS Certification

Cyber Security

Great Learning.

KEY ACHIEVEMENTS

- Smart Worker
- Self Motivated
- Disciplined
- Capable of coordinating with the team
- Ability to work under pressure and stress

EXPERIENCE

Software Engineer

- Rentfur.com - Kaiser Venture

06/2022 - 08/2023Pune, India

 - Developing and maintaining web applications using theLaravel and MERN stack(MongoDB, Express.js,React.js, and Node.js) to improve the website performance.
 - Collaborating with SEO team & google ads team, designers, product managers, and other developers to create and implement new features and functionalities.
 - Designing and optimizing databases using MongoDB and MySQL to ensure fast and reliable data access and management.
 - Integrating APIs and third-party services into the application to enhance its functionality and improve the user experience.
 - Ensuring the application meets performance, security, and scalability requirements, and fixing any issues that arise.

Project name	Description
Rent things project	Developed a Rent Things platform using React for the frontend and Laravel for the backend, allowing users to rent out various items like beds, tables, chairs, and more. The system includes a user-friendly interface where users can list items for rent, browse available products, and manage rental requests. With secure user authentication and seamless integration between the frontend and backend, the platform ensures smooth management of item availability, rental periods, and payment processing, creating a comprehensive solution for peer-to-peer renting.
Stack Overflow Clone	Developed a Stack Overflow clone with secure user authentication and authorization using JWT for login, registration, and role-based access control. Users can post questions, answer queries, comment on posts, and vote on contributions. The platform includes a dynamic tagging system and a robust search feature to make it easy for users to find relevant content. Real-time notifications for answers, comments, and upvotes are implemented via Socket.io. The frontend is built using React.js with Redux for state management, while the backend leverages Node.js with Express.js for the RESTful API and MongoDB for efficient data storage and querying.

Software Engineer

- CodeStreax Technology

05/2021 - 05/2022Sikar, India

 - Developed 20+ new software solutions by analyzing system performance standards.
 - Analyzed systems flow, data usage, and work processes; investigated 100% of problem areas.
 - Integrated existing software into 13 upgraded, modified systems for higher performance.
 - Analyzed 30+ user requirements to derive technical software design and performance requirements.
 - Managing company projects regarding website development and software development.

Project name	Description
Restaurant Management	Developed a comprehensive Restaurant Management system using PHP Laravel, featuring an API for mobile app integration. The system handles order management, table reservations, menu management, user authentication, inventory control, and real-time analytics. It also includes secure payment processing, delivery tracking, and push notifications, providing a seamless user experience for both restaurant staff and customers.
Colleague Management	Built a robust College Management system with dedicated panels for super admin, admin, teachers, students, and parents using PHP Laravel. The system streamlines operations such as course management, student performance tracking, attendance, and communication between all stakeholders. Super admins oversee the entire system, while admins manage daily administrative tasks. Teachers can track student progress, assign tasks, and manage grades, while parents can monitor their child's academic performance and communicate with teachers directly. The student panel allows for access to assignments, grades, and schedules, creating a well-rounded management solution.
