Email: -narasimhamurthi8884@gmail.com

Mobile No: +91 9985455696

Professional Profile:

- With over 5+ years of experience in System & Network Administration, Azure Cloud Administration, and Azure DevOps Engineering, with a strong foundation in DevSecOps principles.
- Proficient in automating build and release pipelines using PowerShell and Azure CLI, and experienced in Automation (Regression/Sanity) to streamline deployment processes.
- Skilled in migrating Cosmos DB data using Azure Data Factory, managing stage environments for backup and restoration, and optimizing costs through automated resource management.
- Successfully implemented Azure DevOps CI/CD pipelines, with deep knowledge of continuous integration and deployment methodologies.
- Experience in automating the shutdown of app services and resources during weekends and reactivating them as needed to optimize costs.
- Expert in managing Infrastructure as a Service (IaaS), including Virtual Machines, Load Balancers, Storage, and VPN Gateways.
- Proficient in managing Platform as a Service (PaaS) offerings such as Web Apps, Azure SQL DB, and Azure Cosmos DB.
- Excellent understanding of containers, deployment systems, and container management platforms, preferably Kubernetes.
- Skilled in configuring Azure Monitor, setting up Application Gateways with WAF rules, and troubleshooting HTTP errors.
- Experienced in managing Identity and Access Management (IAM), Role-Based Access Control (RBAC), and access privileges at various levels.
- Strong programming and debugging skills in a Linux environment, with proficiency in Java, and C/C++.
- Well-versed in the Software Development Life Cycle (SDLC) and proficient with Git repositories.
- Worked closely with developers, analysts, and Azure support to meet project requirements and resolve critical issues efficiently.
- Implemented and managed labs for specific purposes, including troubleshooting issues, conducting daily sanity checks, and integrating labs into CI/CD pipelines.
- Experience in automating lab configurations, network monitoring, and managing storage solutions, ensuring smooth and efficient operations.

Technical Skills:

Cloud	Microsoft Azure
Platform	Windows, Linux (Fundamental Basics)
Source Code Management	GIT, GitHub, Azure Repos
Infrastructure Management Tool	Terraform
Static Code Analysis Tool	Checkov, SonarCloud, Snyk
Scripting Languages	Azure Power Shell
Bug Tracking Tools/Project Management Tools	Azure Boards
CI/CD Tools	Azure Pipelines, GitHub Actions
Container Technologies	Docker, Kubernetes
Monitoring Tools	Azure Monitor, Opsramp

Certification:

- Microsoft Certified Professional (MCP) (MCP-ID:6078758)
- Cisco certified Network Associate (CCNA-R&S) Cisco ID 3212340

Educational Qualifications:

- Diploma in Computer Hardware Engineering A+.
- B. Com from KAKATIYA University Warangal.

Employment History:

- Worked in **HUMINT GLOBAL TECHNOLOGIES Pvt. Ltd, Hyderabad** from Aug 2016 to Dec 2021.

Projects Summary:

Project #1:

Client	KANTAR, USA
Environment	Azure PaaS
Role	KANTAR Automation Platform Senior software developer

Contribution:

- Created and managed Service Connections and extensions.
- Worked on creating build and release pipelines from the ADO according to the Client requirement.
- Developed and improved CI/CD pipelines for automated builds.
- Implemented CI/CD Pipelines for multistage Terraform deployments.
- Configured pre-deployment approvals and Gates for release pipelines.
- Worked on the troubleshooting the services when they are down and tried to resolve the query within time as mentioned in the SLA.
- Worked on Live release and Trail release steps where we had deployments and setup to change the connection db. strings.
- Worked upon the Traffic manager profile mostly worked upon Priority method for bringing the maintenance pages up and for bringing the client portal live.

- Provided access to the users according to their requirement once the users access was approved from the manager.
- Worked on Key vault for across all the environments as the project is based upon micro services.
- Worked on deleting and adding of cosmos containers through automation script.
- Worked on setup to create the new ADF pipeline for new service in ADO portal.
- Worked on Trial and Live deployment steps to stop the services and bringing maintenance pages up.
- reusable Terraform modules in Azure cloud environment.
- Worked on Automation accounts workbook script where I have automated to check the health of the services to check their health status using Rest API method in PowerShell script and scheduled it for Monday every week.
- Worked on cost optimization to the client based on the requirement in various ways,
Example: Limiting the threshold or throughput unit for the cosmos DB from auto scale to manual by running the automation script which will take care of the environment.

Project #2:

Client	Transducers Direct, USA
Environment	Azure PaaS
Role	Azure Cloud/DevOps Engineer

Contribution:

- Worked on multiple PaaS services like – WebApps, SQL Db, Traffic manager, AGW etc.
- Part of Azure DevOps CI/CD Pipelines automation End to End process.
- Coordinating with developers and testers for Build and deploy Related issues.
- Handles miscellaneous activities involving labs, ensuring their continuous operation and readiness for various tasks.
- Configuring and monitoring Cloud services.
- Worked on ARM Templates.
- Worked with Azure support to resolve critical issues.
- Configured Azure Virtual Networks (VNETS), subnets, Azure network settings, CIDR address blocks, DNS settings, security policies.
- Configured PAAS services like App service, App service plan.
- Implemented high availability with Azure Resource Manager deployment models.
- Designed Network Security Groups (NSGs) to control inbound and outbound access to network interfaces (NICs), VMs and subnets.
- Implementation and configuring of Azure backup.
- Performed Scale-Up/Scale-Down of App Service Plan as part of Cost optimization.
- Closely monitor WebApps traffic from Application Insights.
- Prepare and send consolidated HTTP errors/exceptions reports on Weekly basis.
- Pulled reports using Azure Log Analytics.
- Helped Dev team with ad-hoc backups of SQL Db as and when required
- Grant RBAC access to new team members on approvals.
- Provide Just-In-Time access to users on resources.

Project #3:

Client	TSIIC
Environment	State Data Center Administration
Role	System & Network Engineer

HUMINT GLOBAL TECHNOLOGIES Pvt. Ltd
Senior Consultant
(System Network Administration) for the client TSIIC

- ❖ Responsible includes same as APIIC & TSIIC (change of contract)
- ❖ ESXI 6 environment implementation, physical to virtual (VM's) server migration and its maintenance.
- ❖ TALLY ERP server implementation & maintenance state wide.
- ❖ Creating and Configuring Virtual Machines in VMWare Vcenter
- ❖ Create and modify and delete the user accounts and Share Permission for User.
- ❖ Creating and managing the storage accounts and attached the disks when required.
- ❖ Creating Hosted Web Apps Services and Storage Services as per Client Request
- ❖ Installation, configuration and maintenance of Windows Server 2003/ 2008/ 2012/R2/2016
- ❖ Performing Snapshots, resource management in virtual machine as per client requirement like CPU\RAM\Storage etc....
- ❖ User account management through Active Directory, File Share, DHCP, DNS, Cluster & Network Printer Management
- ❖ Policy Management for individual users, Group users and entire organization through Active Directory in Windows 2003, 2008 and 2008 R2
- ❖ Monthly security patches installation for OS through WSUS\SCCM
- ❖ Server performance analysis and performance tuning
- ❖ IBM Blade & X-Series, HP, DELL Power Edge servers, Hardware troubleshooting.
- ❖ Responsible for installation & maintenance of Active Directory Services for Windows Server environment 2003, 2008, 2012, creation & maintenance of user accounts and granting user Permissions and maintenance of Linux red hat 5 servers
- ❖ Responsible for designing and improving existing corporate LAN/WAN infrastructure and co-location
- ❖ Accountable for periodically monitoring of IBM X3850 HP ProLiant ml350 g5 servers.
- ❖ Installing and configuring Windows 2000 / 2003, 2008 & 2012 Server and different clients like Windows 2000 professional and XP Professional, Windows 2007 & 2008.
- ❖ Installation of various types of Hardware equipment's.
- ❖ Installation of various types of Software, up-gradation of Systems.
- ❖ Configuring system as per the client's requirement.
- ❖ Configuring and troubleshooting of Network Printer
- ❖ Configuring different types of user profiles (Local, Domain).
- ❖ Assign IP address to the systems and taking Backup the data for the Users
- ❖ Solving LAN queries.
- ❖ Responsible for resolving issues within the time frame by contacting the IBM and ERP.
- ❖ Troubleshoot problems reported by users and analyze issues.
- ❖ Configured Remote desktop service roles
- ❖ Instrumental in designing and implementing new data center facilities including physical design, network provisioning, UPS, security, capacity planning considerations etc.
- ❖ Liable for network/System upkeep, troubleshooting networks/System problems
- ❖ Responsible for maintaining network security policy, addressing server security issues and applying appropriate security patches and upgrades
- ❖ Monitoring web application hits to analyze performance.
- ❖ Taking daily, weekly and monthly backups
- ❖ Supporting and troubleshooting desktop problems
- ❖ Documenting all reports.

SERVER ENVIRONMENT

- ❖ DNS Server
- ❖ Thin client Server
- ❖ Antivirus Server (McAfee, Quick Heal & Symantec Norton)
- ❖ File sharing server
- ❖ Administering network and internal monitoring of Data center
- ❖ Maintaining ERP Servers with Linux OS based
- ❖ Biometric Server
