PROFILE

MCA-qualified professional with over 6 years of experience in Project Management, Stakeholder Engagement, Resource Management, Onboarding & Training, and Product Triaging. Skilled in managing projects across Waterfall and Agile methodologies, with hands-on expertise in SDLC tools such as Smartsheet, MS Project, and Trello.

Bringing 11+ years of strong development experience in technologies including .NET Framework, ASP.NET, MVC, ADO.NET/Entity Framework, C#, XML, and MS SQL Server. Additionally experienced in tools and platforms like Form.IO, JAMS, SSO, DevOps, Java, PHP8, Azure, and AWS. Proven ability to bridge the gap between technical teams and business stakeholders to deliver high-quality solutions.

EMPLOYMENT HISTORY

A) Technical Project Manager, Kellton, Gurugram

22nd August 2022 till date

1) SOLAR BY LUMINOUS

Client: Luminous India

Team Size: 8

Project Details: "Solar by Luminous" (<https://www.solarbyluminous.com>) is a client facing website which contains the details of various solar products, where the customers can check various products available; check their requirement by using the load calculator and place orders. They have another portal (<https://www.portal.solarbyluminous.com>), which has various roles like CCE (Customer Care Executive), Site Surveyor, Project Manager Etc., and that handles the complete workflow from calling a random probable customer, lead generation, installation and payment.

Technologies Used: Angular 5, PHP, MySQL

Roles & Responsibilities:

- Preparing Project Plan.
- Team leadership and management
- Hosting weekly Cadence calls with the client
- Technical oversight
- Strategic planning and process improvements
- Billing and budget management

- Ensure delivery of work packets as per the schedule.
- Encourage the team for quality work.

2) LUMINOUS E-SHOP

Client: Luminous India

Team Size: 32

Project Details: “Luminous E-Shop” is an ecommerce project of Luminous India. This will replace the existing “Shop Now” option on their portal www.luminousindia.com. This will take care of listing of products like inverters, batteries etc., their details, availability, store details, load calculator, product comparisons, add to cart and checkout.

Technologies Used: Angular 5, C#, HTML, SQL

Roles & Responsibilities:

- Preparing Project Plan.
- Team leadership and management
- Hosting weekly Cadence calls with the client
- Technical oversight
- Strategic planning and process improvements
- Billing and budget management
- Ensure delivery of work packets as per the schedule.
- Encourage the team for quality work.

3) BUSINESS STANDARD

Client: Business Standard

Team Size: 6

Project Details: “Business Standard” project consists of development, enhancement and support of android and iOS applications for the media house. It requires continuous development, monitoring, enhancement of the application, managing the subscriptions, handling customer issues based on the feedback, and managing the promotions during various festive seasons.

Roles & Responsibilities:

- Preparing Project Plan.
- Team leadership and management
- Hosting weekly Cadence calls with the client
- Technical oversight
- Strategic planning and process improvements
- Billing and budget management
- Ensure delivery of work packets as per the schedule.
- Encourage the team for quality work.

4) HATHWAY OAP

Client: Hathway

Team Size: 12

Project Details: “Hathway OAP” project involves continuous development and support. It’s developed using LAMP. The team provides 24x7 support for the applications. It consists of a BA, two Tech Leads, one QA and seven developers. The application handles the day to day activities of the major cable TV provider, like subscriptions, complaint management etc.

Roles & Responsibilities:

- Team leadership and management
- Hosting weekly Cadence calls with the client
- Technical oversight
- Strategic planning and process improvements
- Billing and budget management
- Ensure delivery of work packets as per the schedule.
- Encourage the team for quality work.

5) ABBOTT BRAND CHECK

Client: Abbott Healthcare

Team Size: 12

Project Details: “Abbott Brand Check” is an AIML tool, which verifies the correctness of various collaterals e.g. banners, posters, letters, etc. under print category, presentations, e-agenda, e-posters, video etc. under digital category, with respect to Abbott guidelines. In case of any violation of guidelines, the portion of the document is highlighted and the appropriate suggestion is given, so that the user does the necessary corrections. The system keeps learning from the regular analysis and strengthens itself for accuracy in error detection.

Technologies Used: Python

Roles & Responsibilities:

- Preparing Project Plan.
- Team leadership and management
- Hosting weekly Cadence calls with the client
- Technical oversight
- Strategic planning and process improvements
- Billing and budget management
- Ensure delivery of work packets as per the schedule.
- Encourage the team for quality work

6) KFC SA- DSR

Client: KFC S

Team Size: 3

Tech stack: Android, iOS, LAMP, React JS

Project Details: The application helps the KFC stores to create their staff routines, Maintain the quality of the food products by checking the oil temperature, oil quality by using handheld bluetooth devices which are integrated with the application

7) Club Mahindra

Client: MHRIL

Team Size: 22

Tech stack: LAMP, .Net, React JS

8) Purchasing Power

Client: Purchasing Power

Team Size: 2

Tech stack: Android, iOS

B) Principal Support Engineer, BrandMuscle India Pvt. Ltd, Bengaluru

24th December 2018-19th August 2022

Client: Around 200+ Clients in USA

Team Size: 15

1) BRANDBUILDER

Product Details: Brandbuilder is the major product of BrandMuscle. The product enables a client in creating all possible items with respect to promotion of their brand. The product configuration takes a month or two depending on the features opted by the client. The clients get a self-service portal with 24hrs support from Brandmuscle.

Roles and responsibilities:

- Planning and assigning tasks related to new client implementation.
- Ensure in time delivery by monitoring progress of tasks.
- Code review and deployment of work packets
- On boarding and training new resources till they are ready to pick up tickets
- Triaging the bugs and enhancement tickets and assigning them to the right resource.
- Manage the boards of top 15 premiere clients with respect to deliverables.
- Host daily stand ups with leads and the entire team to address their queries.
- Prepare Resource Utilization Reports on a weekly basis with retrospective view.

2) LOCATIONBUILDER

Product Details: LocationBuilder is an additional product meant for clients having multiple branches/franchises. The product helps the client with all the requirements in setting up their branches. The product is subscription based with 24hrs support.

3) CHANNELBUILDER

Product Details: ChannelBuilder is an additional product meant for clients having multiple branches/franchises. The product helps the client with all the requirements in setting up their branches. The product is subscription based with 24hrs support.

4) CHANNEL FUND MANAGEMENT (CFM)

Product Details: CFM is an additional product. The product helps the client to procure funds for their agents to utilize them for various programs throughout the year. It has features like Fund request, Claim Submission, Disbursement, Fund Transfer etc. There is a self-serve module for the admins/internal users to manage things like Program creation, Workflow Creation, etc.

C) Lead Consultant, ITC Infotech India Pvt. Ltd., Bengaluru

22nd NOVEMBER 2007 – 21st DECEMBER 2018

1) DEPLOYMENT WORKFLOW MANAGEMENT

Client: Apollo Group-USA **Development:** Mar'13

till Jun'13(Onsite), **Team Size:** 4 **Enhancement &**

Support: Jul'13 till date, **Team Size:** 4

Tools/Languages/Database used: .Net framework 4.7, ASP.Net MVC, C#, SQL Server 2012

Project Details: Deployment Workflow Management system was built to process new Deployment requests as well as the package requests which were opted for Self Service or Software Delivery. In case of a new Deployment request, the requester has to select an existing application from the library and raise a request with deployment details. For packaging requests (self-service/Software delivery), when the application passes UAT, a new deployment request is created with provided details. IT Approver has to approve the deployment requests after which the Deployer has to review and accept the request. The requests go through three deployment phases called Alpha, Pilot and Production. If the results of any stage are unacceptable, the deployment is rejected by IT Approver. The system also consists of automated email notifications to the stage owners, consolidated view of related deployments, customized deployment reports.

Roles and responsibilities:

- Was involved in designing.
- Was involved in coding.
- Was involved in Unit Testing.
- Was involved in Integration Testing

2) RESOURCE SCHEDULER SYSTEM

(RSS) Client: Apollo Group-USA

Duration: Sep'12 till Oct'12

Team Size: 1

Tools/Languages/Database used: .Net framework 3.5, ASP.Net, C#, SQL Server 2005

Project Details: A custom app that does URL redirection based on source IP address. The website looks at the IP address of the client, based on which it redirects the URL request to one of the two servers. The list of the subnets of all the work sites is saved in DB along with the URL to which it needs to redirect. The application collects the IP address of the client system and internally calculates the subnet range using the IP. Then it checks the DB for the resulted subnet range and does the corresponding URL redirection. If the subnet range does not exist in the DB, the particular range is inserted in a new table in the DB which is later updated in the main table with suitable URL for future redirection in a frequent interval using a script.

Roles and responsibilities:

- Was involved in designing.
- Was involved in coding.
- Was involved in Unit Testing.

3) DEFINITIVE MEDIA LIBRARY(DML)

Client: Apollo Group-USA **Development:**

Dec'10 till Aug'12, Team Size: 4 **Support:**

Aug'12 till date, Team Size: 1

Tools/Languages/Database used: .Net framework 3.5, ASP.Net, C#, SQL Server 2005

Project Details: The DML is an application packaging portal which handles all the operations starting from a request raised for an application till its deployment. The portal is accessible to different roles like requester, GAP Validator, Financial Approver, Packager, Tester and administrator. The application request goes through various approval and validation stages and then packaged and tested before deployed. The packaged applications accepted by the requester are stored in a library to address the same request made in future. The different stages have predefined SLA which is strictly followed. The packages are built as per the requirements provided. If configuration details are omitted or incorrect, a rework may be required. The SLA will be reset accordingly. The administrator has complete managing control over the portal. For a normal user the features of the portal are as follows.

- Request for a new application to be reviewed and packaged for a standard desktop.
- View Apollo Standard Application Package Library
- Obtain Approvals for your requests
- Follow and Track your requests

- View known Information and Issues regarding Applications (Deployment, Conflicts etc) Roles and responsibilities:
- Was involved in designing.
- Was involved in coding.
- Was involved in Unit Testing.
- Was involved in Integration Testing

4) UTILITIES FOR WINDOWS 7 IMAGE

Client: DHL, CZ

Duration: Jun'10 till Nov'10

Team Size: 1

Tools/Languages/Database used: .Net framework 2.0, C#.net, SQL Server 2005

Project Details:

- Splash Screen for Windows7:** A splash screen was built with a customized image containing a message for the user during OS installation. That was included in the Windows7 image. When the installation process is going on, the keyboard and mouse are disabled till the installation of the OS is completed. The transparency of the image keeps on changing to give the user a view of the process going on in the background.
- Shutdown Option during Imaging:** A system was included in the customized OS, so that the user can shut down the machine clicking a button when the installation requires specific information about configuration and security settings, which was not accessible to the users. In this situation the user contacts the IT service with the help of contact info provided on the screen and shuts down the machine or continues the imaging as per the suggestions from the IT department.
- Sysinfo:** An application was built to display complete system information which was pinned to the start menu of the OS. The information included Computer name, IP Address, DNS, DHCP, MAC Address, Computer make, model and Serial number, BIOS version, GCB Version, GCB Installed Date, User Name, User Domain, Computer Domain, Operating System, Service Pack and Proxy.

Roles and responsibilities:

- Was involved in designing.
- Was involved in coding.
- Was involved in Unit Testing.

5) GDS APPLICATION PACKAGING PORTAL (APPTRACK)

Client: DHL, USA

Development: Nov'07 till Nov'09, Team Size: 4

Support: Dec'09 till Nov'10, Team Size: 1

Tools/Languages/Database used: .Net framework 2.0, ASP.Net, C#, SQL Server 2005

Project Details: Apptrack is a web portal used by the employees of DHL across the globe to raise requests for desktop applications. The requests raised are approved or rejected by the FES approver. Approved requests go for validation where the complexity of the request is set. After validation the request goes to the packager and the application is packaged as per the request. A package document is prepared and is uploaded to the portal along with the packaged application. The application goes to the testing phase, where the tester verifies the packaged application with the standards and the specifications mentioned in the packaged document. If the application is without issues then it goes to the FES Approver for UAT or else goes for repackaging. If the package passes UAT, it goes to deployment stage and is stored in the library so that quick delivery can be made if the same request is raised in future. If UAT fails the application goes for packaging. For each stage change, the stage owners are notified through automated mail. Each stage has a predefined SLA which is strictly followed.

Roles and responsibilities:

- Was involved in designing.
- Was involved in coding.
- Was involved in Unit Testing.
- Was involved in Integration Testing.
