Projects

24 Months

Distrigoboo and Flauraud

Distrigoboo and Flauraud are web-based applications

designed for Customer Relationship Management (CRM) in the automobile industry. These applications include a variety of features such as sales reports, a dashboard with widgets, a calendar for events, an account management module, target-setting capabilities, and support for different user roles (Salesman, Manager, Director, Admin). Managers and Directors can use these applications to set targets for Salesmen and track their performance through various detailed reports.

853 Days

Avidhub (MyPanelHub)

Avidhub is a survey-based market research project designed for gathering market insights. The project is built using Laravel and MySQL for the backend and Angular for the frontend. Through the web application, users can create surveys with various question types such as single-select, multi-select, number rating, star rating, and open-ended questions, with the ability to set conditional logic for questions. For example, if a respondent selects "yes" on the first question, the second question will appear; otherwise, it will be hidden. The application also includes multiple reports to help retailers analyze survey results and gain insights into their products.

270 Days

Orbit

Orbit is a travel application for iOS and Android platforms, with APIs created using Laravel (PHP framework). Additionally, Orbit features a web application for admin and driver roles.

335 Days

Homestuffplus

This e-commerce website allows users to purchase a variety of products, including sofas, chairs, and other furniture and home appliances.

It features an admin panel for managing product additions, updates, and details like quantity, pricing, discounts, images, and product categories.

The user panel enables customers to add items to their cart, checkout, make payments, and track their order history up to delivery. It also offers a return policy and product rating options.

244 Days

Verify360

This project offers an Online Resume Builder where users can create their resumes for free. Users also have the option to get their resumes verified through Verify360's international partners, with the verified resume displaying a Verify360 seal for educational and employment credentials. Resume verification payments are processed via Stripe.

24 Days

Refinery Solutions

This is a Content Management System (CMS) project featuring a web application built using the CodeIgniter framework. The application includes both an admin panel and a user panel. Changes made in the admin panel are automatically reflected on the frontend user panel pages.
