Profile Summary

A highly skilled and detail-oriented Data Engineer with 4.6 overall years of experience and 3 year experience in designing, building, and maintaining scalable data pipelines and architectures. Proficient in managing end-to-end data workflows to support business intelligence, analytics, and machine learning initiatives. Adept at optimizing data processes, ensuring data quality, and collaborating with cross-functional teams to deliver robust data solutions.

Work Experience

Associate

Tata Consultancy Services

08/2021 - Present

An Azure Data Engineer specializes in designing and implementing scalable data solutions on Microsoft Azure. This role involves building data pipelines, transforming raw data into usable formats, and ensuring seamless integration with analytics and machine learning systems to support business insights and decision-making.

- Implement data warehousing solutions, data lakes, and databases optimized for financial data storage and processing.
- Develop and maintain ETL (Extract, Transform, and Load) pipelines to ingest financial data from various sources into Azure storage and databases.
- Implement data validation, cleansing, and enrichment processes to ensure data accuracy and quality.
- Automate data extraction, transformation, and loading processes using Azure Data Factory, Azure Data bricks, or other relevant tools.
- Integrate data from diverse systems, including

transactional systems, market data feeds, trading platforms, and accounting software.

- Enable seamless data flow between on-premises systems and Azure-based solutions.
- Administer and optimize Azure SQL databases, or other relevant database solutions to manage data efficiently.
- Monitor database performance, troubleshoot issues, and perform necessary optimizations.

Operations Analyst

Sutherland

06/2017 - 03/2019

- Main activities involved performing data-driven analysis, providing insights and recommendations for the customer related streaming data on dish television networking data.
- Understanding and analysing the issues faced by the customers during streaming of the dish TV data, performed solving problems by utilising heuristics and signal processing-based analytics.
- Created a Standard Operating Procedure documentation and provide a network issue document for the corresponding issues

Education

B.Tech/B.E. - Computers

2017

JNTU College of Engineering, Kakinada
