## PERSONAL SUMMARY

---

As a results-driven Data Analyst, I transform complex datasets into actionable insights using tools like Python, SQL, excel and Power BI. With a strong foundation in statistical analysis and predictive modeling, I excel in uncovering hidden patterns that drive informed business decisions. My keen eye for detail and ability to communicate technical concepts to non-technical stakeholders make me thrive in dynamic environments.

## EDUCATION

---

**Degree : Master of Science** Year : 2020 - 2022

**Subject : Business Analytics & Big Data Management**

**University : University of Liverpool**

**Degree : Bachelor in Technology,** Year : 2016 - 2020

**Subject : Electrical Engineering**

**University : Medi - Caps University**

## SKILLS

---

|                                    |                                                                                                        |
|------------------------------------|--------------------------------------------------------------------------------------------------------|
| <b>Languages</b>                   | SQL, MYSQL, PostgreSQL, Python (libraries), Apache Spark                                               |
| <b>BI and Reporting Tools</b>      | Power BI & Page Builder, DAX, Excel, Tableau, Mapshaper & Mapbox                                       |
| <b>Cloud Computing</b>             | Data Factory, Data Lake, Data Bricks, Azure Synapse Analytics, Snowflake Schema                        |
| <b>Machine Learning Algorithms</b> | Regressions, Clustering, Random Forest, Decision trees, Natural Language Processing and Neural Network |
| <b>Other</b>                       | Microsoft Office                                                                                       |

## EXPERIENCE

---

**Graduate Consultant** Sep 2022 – Dec 2023  
Archus *Manchester, UK*

- **Hywel Dda Health Board Demographics Analysis:** Successfully streamlined the data loading and transformation processes into the data warehouse, facilitating advanced reporting and visual analytics. Applied linear regression using python (pandas and numpy) to perform predictive analysis on the populations of Llandovery, Fishguard, and Aberystwyth, identifying a 50% projected increase in the population aged 60 and above. These findings were instrumental in informing client briefings and guiding strategic planning efforts.
- **Swansea Bay Health Board Business Case Research:** Developed a comprehensive data visualization report on nation wide diabetes and coronary heart disease trends using Power BI and DAX , revealing a 40% increase in diabetes prevalence in economically deprived areas. Delivered strategic, data-driven recommendations based on in-depth analysis to guide healthcare decisions on coronary diseases.
- **Glasgow and Clyde Health Board Project:** Conducted a detailed analysis of patient categories by specialty using client-provided datasets. Liaised Power BI for data visualization and Excel for forecasting healthcare space requirements, identifying a shortfall of 800 wards over the next 15 years.
- **Lanarkshire Urgent, Unscheduled Care and National Treatment Center Initiatives:** Combined Power BI and Excel to profile the data, generate actionable insights through advanced data modeling and exploratory data analysis. Played a pivotal role in PMO support, ensuring the seamless execution of urgent care and treatment center projects.
- **Ireland and Canada Demographics Study:** With the help of ERwin data modeling tool directed the end-to-end ETL process and data warehousing of extensive datasets on population and healthcare infrastructure for international projects. Leveraged expertise in data integration and data analysis from diverse international

sources, demonstrating a global perspective of healthcare infrastructure. Showcased complex demographic and healthcare spatial data challenges, driving data informed decision-making.

## **Junior Data Analyst**

Parental Drug Private Limited

June 2018 - July 2019

*Indore, India*

- Executed detailed data modeling tasks in Excel, leveraging complex formulas and pivot tables, leading to a 30% increase in data processing efficiency and enhanced decision-making capabilities for senior management.
- Revolutionized data presentation through sophisticated Power BI and Tableau dashboards, converting complex datasets into clear, actionable insights; improved project completion rates by 30% and decision-making speed by 35%.
- Integrated large datasets to generate 30% more high-quality insights. Processed and streamlined detailed, comprehensive data analyses to both technical and non-technical teams, ensuring clarity and actionable insights for all stakeholders.
- Devised advanced algorithms to streamline data analysis, boosting accuracy by 25%, and swiftly adjusted to evolving project demands, ensuring continuous improvement and contributing to high-impact, agile projects.

## **PROJECTS**

---

**Image Recognition and prediction of it's classes using Convolution Neural Network.** Utilized Convolutional Neural Networks (CNN) to classify images from the Fashion-MNIST dataset, achieving an accuracy rate of 80

**Prediction of Tesla Stocks using LSTM neural network:** Developed and implemented an LSTM Neural Network model to train and test predictions, achieving an 87% accuracy rate in forecasting Tesla's stock value.

**Movie recommendation system using K – NearestNeighbor.** Worked on using KNN method to predict the movies that a customer would like using user-item matrix.

**Data Modeling and visualization of Arcadia using Power Bi and DAX.** Developed few dashboards over Power BI for 'Arcadia' using DAX.

**Data Analysis of USA Housing data using Linear Regression.** Data Exploratory analysis and prediction done on the USA's housing data via Linear Regression.
