PROFESSIONAL SUMMARY

- Having total 3+ year of relevant experience in Software Engineer domain. (**Front-end, Back-end.**)
- Experienced software engineer proficient in **React, Node.js, HTML, CSS, Redux JavaScript** and **MongoDB** with a record of accomplishment of delivering high-quality solutions.
- Good problem solving skills & delivering work on time.

TECHNICALSKILLS

- Programming Languages: HTML, CSS, Frontend web development, Javascript
- Web UI Frameworks: Bootstrap, React JS, Node Js, MongoDB
- Tools: git, Visual Studio, Unix/Linux internals

WORK EXPERIENCE & TRAINING

Worked as a Software Engineer in ACL Digital Company from Feb 2022 – 7March 2025

PROJECTS

1. Glass Detection

Objective: The objective of this project is to implement a robust safety glass detection system. I developed a user-friendly interface by utilizing React for the frontend, Nodejs for the backend and MongoDB for the database
Training the algorithm using machine-learning techniques on a dataset of images containing workers with and without safety glasses.
Integration with existing security systems to trigger alerts or notifications in such instances.

Responsibilities:

- I am using Visual Studio Code development methods
- Build back-end services for various modules such as for face Detection, Glass Detection.
- I create json files
- I worked on Data annotations
- I create Rtsp configuration for live streaming

2. ACL Chat

Objective: The objective of this project is to develop a comprehensive chat and marketplace platform exclusively for ACL Digital employees.
Real-time messaging functionality for one-on-one and group conversations.
Privacy settings to control visibility of profile information and listings.
Keyword-based search with filters for refining results.
API endpoints for potential integration with external systems or services.

Responsibilities:

- I am using Visual Studio Code development methods

- Build back-end services for various modules such as Registration, Login, management.
- Writing reusable, efficient code.
- Effectively use tools and ingenuity to identify and fix defects before they become a problem

3. Create Web Page

Objective: Develop static web pages to display the company's products, services, and brand identity.

A welcoming introduction to our company, highlighting key services, achievements, and values.

A comprehensive overview of our company's history, mission, vision, and team.

Detailed descriptions of the services we offer, including any specialization or unique features.

Showcase of past projects, case studies, or client testimonials to demonstrate our capabilities.

A convenient means for visitors to reach out to us, including a contact form and essential contact information.

Responsibilities:

- I am using Visual Studio Code development methods
- Build back-end services for various modules such as for face Detection, Glass Detection.
- I create json files
- I worked on Data annotations
- I create Rtmp configuration for live streaming

4. DXC

Objective: Worked on a project for DXC where I utilized React for the front end, Node.js for the back end, and MongoDB for the database. Our motive is to demonstrate the application of cutting-edge AI and ML technologies, specifically focusing on Natural Language Processing (NLP), Computer Vision, and Speech Recognition. The project highlighted the potential of these technologies in various sectors, including hospitals, schools, and worksites

Planning & Data Gathering: Define objectives and collect relevant data.

Model Development & Integration: Develop AI/ML models and integrate them.

Demonstration & Evaluation: Display and assess the AI/ML applications.

Responsibilities:

- As a team member, responsible for understanding requirements of the project.
- Write the multi-code for form elements
- I replicate two web page, which is login, and sign in page.
- I also create back-end Service for landing page

EDUCATION

- B Tech From Sagar Institute Of Research And Technology B.Tech(C.S) Bhopal Madhya Pradesh in JULY 2021
