ROLES AND RESPONSIBILITIES

- Pre-sales RFP Support to Transform into Business
- Coordinate with leadership to define strategy, roadmap features, and improvements of Temenos SaaS.
- Proactively apply technical and process assets to:
 - Drive consistently high quality in our services.
 - Prevent business emergencies.
 - Increase client value.
- Provide end-to-end knowledge to the Temenos Cloud Onboarding team.
- Provide thought leadership to all technical teams and assist in all phases of the projects.
- Improve our competitiveness by driving efficiency and productivity.
- Lead organization-wide discussions around operational issues and tooling improvements for the various Temenos products related to the onboarding process.
- Coordinate initiatives across teams at Temenos around onboarding, monitoring, deployments, and support-related challenges.
- Support the organization's rapid growth by hiring new engineers, leads and leveling up the skills of the team.
- Drive architecture discussions, process improvements, planning, and tracking of work assignments for timely deliveries and address escalations with quicker resolutions.
- Provide weekly status reporting with risks, mitigations, and issues.

Technical Leadership

- Understand the customer's infrastructure, product requirements, and how it supports their business.
- Build and manage relationships with the customer's lead technical personnel.
- Participate in the Global Onboarding governance meetings and reviews; provide technical leadership during governance meetings to drive technical issues.
- Drive technical service improvements to enhance customer satisfaction.

Technical Risk Management

- Establish the process for capturing technology risks and issues for every project.
- Consolidate and manage all technical risks across the total solution for the contracts.
- Work with Solution Architects and the SaaS Architecture Board to define end-to-end solutions, including system architecture and design, and any associated changes.
- Ensure a smooth hand-off of the transition/transformation technical solution into steady-state support.
