

ORACLE PL/SQL DEVELOPER RESUME

G NAVEEN KUMAR

E-mail id:naveenk.oracle19c@gmail.com

Mobile No: 9972256975

Professional Summary

- **6 + Years of good Experience in analysis, design, development of implementation and application in SQL, PLSQL and with UNIX Environment.**
- Expertise in Oracle Technology with strong knowledge in SQL and PL/SQL in constructing **packages, stored procedures/functions, triggers, tables collections, sequences, index, views**, along with **Oracle Cursor Management and Exception Handling.**
- Involved in Performance tuning (**SQL tuning and PLSQL tuning**) to reduce the programs execution time.
- Strong Experience in designing oracle databases with 9i version.
- Complete understanding of software development life cycle.
- Good communication skills, interpersonal, learning and organizing skills.
- Good Knowledge on Retail Banking domain.

Experience:

- I worked as Software Developer with **VERINON TECHNOLOGY SOLUTIONS PRIVATE LIMITED** from **FEB 2024 to SEPT 2024**
- I worked as Software Developer with **EPAM SYSTEMS INDIA PRIVATE LIMITED** from **JUL 2023 to NOV 2023.**
- I worked as Software Developer with from **ONTRACK SOFTWARE PVT LTD** **JUL 2018 to JUNE 2023**
-

Educational Details:

- **B.COM(Computers) from Sri Venkateshwara University, Tirupati.**

Technical Skills	
Operating Systems	UNIX, Windows, MS-DOS
Languages	SQL, PL/SQL, Unix Shell scripting
Databases	Oracle 9i/10g/11g/12c/19c
Scripting Languages	UNIX SHELL Script

Configuration tools	Oracle SQL Developer, PL/SQL Developer, Toad, SQL * PLUS, Serena Dimensions, SDPA, Putty, Autosys.
Code inspection tools	Understand Visual Basic 5.0, C and Core Java

Projects Experiences

Project 1: Feb 2024 to Sep 2024

Name	: ART (Account review tool)
Client	: RTX,BANGLORE
Technology	: ORACLE SQL,PL/SQL, C, Sybase, UNIX Shell Scripting
Tools/ Software	: MAKE UTILITY, GDB, GIT, FileZilla, Vi editor, Putty, Autosys.

Project Description:

Relationship manager should be able to view client wise payment transaction data so that he/she can periodically review the account activities and verify if the client is performing transaction as per expected purpose of the account

Account activity review will assess the extent to which the expected account activate and purpose of account is consistent with actual account activity and that the actual activity is in line with the rest of the CDD profile.

Responsibilities:

- Creating Technical Design documents.
- Creating Estimation documents from the functional documents.
- Writing PL/SQL Stored Procedures, Functions, Packages and Triggers.
- Responsible for development and maintenance METHODS.
- Developing the code, Unit testing and reducing entry-level errors
- Savings account accrual process had modified based on the Daily Closing balance.
- Prepared documents for UTP, FS, PS and support for SIT.
- Resolve day-to-day problems, defects and provide enhancements in the current system.
- Analysis the issues and raised during the implementation/production .
- Support the End of Day (EOD) process of Bank.
- Savings account accrual process had modified based on the Daily Closing balance.
- Prepared documents for UTP, FS, PS and support for SIT.
- Resolve day-to-day problems, defects and provide enhancements in the current system.
- Analysis the issues and raised during the implementation/production .
- Support the End of Day (EOD) process of Bank.
- Provide back-to-back user support during implementation (UAT/LIVE phase).

Project 2: July 2023 to Sept 2023

Name	: Barclay's data migration
Client	: Barclays bank, UK
Technology	: SQL, PL/SQL, UNIX (AIX), LINUX, UNIX Shell Scripting.

Project Description:

Barclays.Net is being developed as the strategic cash management tool for Barclays to service the corporate customer base. Delivery of Barclays.Net has been split into a number of distinct releases where is a part in Release 2. For Release 2 the delivery of Barclays.Net will include the functionality relevant to support a national launch of the product, and as such, will initiate a process to migrate customers from existing channels (BIB and BM). To support this process and to minimize the customer impact, tool is being that utilizes automated processes in order to migrate customers from BIB and BM to Barclays.Net.

Responsibilities:

- Creating Technical Design documents.
- Creating Estimation documents from the functional documents.
- Writing PL/SQL **Stored Procedures, Functions, Packages and Triggers**.
- Responsible for development and maintenance METHODS.
- Developing the code, Unit testing and reducing entry-level errors
- Savings account accrual process had modified based on the Daily Closing balance.
- Prepared documents for **UTP, FS, PS** and support for SIT.
- Resolve day-to-day problems, defects and provide enhancements in the current system.
- Analysis the issues and raised during the implementation/production .
- Support the End of Day (EOD) process of Bank.
- Provide back-to-back user support during implementation (UAT/LIVE phase).

Project 3: July 2018 to June 2023

Name	: GRC (Credit Risk World-wide Database)
Client	: BNP Paribas Group
Technology	: ORACLE PL/SQL, UNIX Shell Scripting

Project Description

GRC is developed for BNP Paribas Bank, France. The main functionalities of this GRC are to calculate the credit risk. The BNP Paribas Bank provides Loans to the customers and other Banks and States based on the analysis of the GRC applications.

The main aim is to produce all the consolidated reporting relative to credit risk (loans, titles...). Of the BNP Paribas Group. These reports include an internal and a regulatory section. They are divided into country risk reporting, credit risk reporting (Financial information, Major Risks etc.), economic capital and regulatory reporting (BFI, Group) as well as the IAS provisions on the portfolio base. The architecture of the GRC allows to measure the risks as per different methodologies and to produce all the reports from the same data.

The GRC Application is integrated with 14 other Engines. Each Engine is specific to particular task. For Example, engine1 is used to get the new BRC Bank account holders' information along with the loans and personal profile and credit history. Engine2 is used to check the accounts are valid and so on. Data will be loaded into the system from these engines. Once the data is loaded in the system the GRC application will analyse the credit risk. Based on the credit risk reports the BRC Bank will approve the requests. And finally, the data will be uploaded into the Oracle Applications.

Responsibilities:

- Developed code for the tax deduction at source for Term deposits based on the threshold limit and also for CASA Accounts.
- Creating Technical Design documents.
- Creating Estimation documents from the functional documents
- Creating **Packages, Stored procedures, functions and triggers.**
- Working on Native **Dynamic SQL** statements.
- Used **Collections** and **Ref cursors** to process array of records.
- Granting Privileges to other users.
- Loading data to tables using **SQL* Loader** utilities and SHELL SCRIPTING.
- Data validations using SHELL SCRIPTING.
- Designing interface programs for calculating the credit risk
- Preparing Ad hoc Queries for credit analysis.
- Preparing Test cases and Test Results and making Unit Test Plans.
- Involving in Integration testing.
- Conducting knowledge transfer sessions within the team.
- Integrate R with data source and delivery systems.
