About Me:

Result-driven software analyst with **5 years** of experience in **requirement gathering, stakeholder management and system design**. Passionate about leveraging technology to streamline operations and enhance business process. Skilled in gathering and translating client requirements into innovative technical solutions. Seeking opportunities to apply my analytical mindset and technical acumen to contribute effectively to dynamic projects and achieve business objectives.

Summary:

- Proficient in gathering and translating client requirements into actionable technical specifications, resulting in efficient system enhancement and process optimizations.
- Experienced in facilitating communication between technical teams and business stakeholders.
- Skilled in custom report generation using PowerBI, product customization and cross-functional collaboration to deliver innovative solutions.
- Adept at leveraging analytical tools and methodologies to identify the opportunities for improvement and enhance operational efficiency.
- Conducted thorough gap analysis to identify discrepancy between current and desired states, implementing corrective actions to bridge gaps and mitigate risks.
- Proficient in product customization, including the development of custom menus tailored for data capturing purposes.
- Competent in end-to-end software lifecycle management, including requirement gathering, analysis, design and development, ensuring seamless alignment with project objectives and stakeholder needs.
