EXPERIENCE

Blockchain Developer

DataBloc Technologies

November 2023 - October 2024

- Developed and integrated Smart Contracts for DeFi protocols, covering Perpetual Trading, Market Creation, Deposit, Liquidation, and staking of EsFxdx, along with on-chain and off-chain price feed systems. This involved development and testing to establish a secure and efficient system.
- Designed and deployed robust backend cron jobs for liquidation and ADL management of user positions.
- Aggregated various protocols, including GMX V1, GMX V2, Synthetix, and HyperLiquid (on-chain order-book), into a single platform, increasing access to liquidity pools, available tokens, and improving overall trade execution.
- Integrated Prisma ORM into the project architecture, enhancing database management efficiency, ensuring robust type safety, and streamlining development.
- Conducted comprehensive testing of smart contracts using Foundry, including invariant testing, unit testing, and integration testing.
- Accomplished Oracle integration to furnish real-time price data for cryptocurrency assets and leveraged the Graph protocol for streamlined retrieval of historical transactions and events, reducing latency and RPC calls by up to 70%.
- Developed an invite code mechanism system, providing functionalities access to specific users only.
- Collaborated in the construction of a User Interface (UI) leveraging ReactJS and Next.js, seamlessly integrated with Smart Contracts for enhanced functionality using Viem and Ethers.js.

Blockchain Developer

Content Creation

August 2023 - October 2023

- Designed and tested GraphQL and SubGraph queries, improving performance and reducing the number of bugs.
- Developed jobs for continuous data fetching from WebSockets and integrated the database for the tokenization of pharmaceutical drugs.
- Deployed smart contracts on the Solana ecosystem, including vaults and token contracts.
- Enhanced application performance by leveraging Redis as an in-memory data store, enabling fast information retrieval and significantly reducing latency.
- Developed a robust backend infrastructure using Node.js and PostgreSQL, facilitating seamless data retrieval for all users.
- Implemented Docker for containerization, enabling consistent development environments and improving deployment efficiency.

PROJECTS

Crypto Stake Haven

667325fdff107b72613e52c4--luxury-kleicha-c2c45f.netlify.app

- Developed a decentralized staking DApp where users can stake STK tokens and receive RTK tokens as rewards.
- Tested and deployed using Remix, maintaining DeFi standards and enhancing user experience..
- Skills: Solidity, Hardhat, Remix IDE, React.js, JavaScript

InvoiceFlex DeFi Platform

clever-klepon-0c9a51.netlify.app/welcome

- Developed a sophisticated landing and borrowing DeFi platform for manufacturers where they can borrow funds by uploading invoices, without requiring collateral.
- Implemented a secure workflow where funds are released upon external approval of uploaded invoices. .
- Skills : Solidity ,Hardhat , Ether.js , express, MongoDB , Nodejs , Tailwindcss, cloudinary

EDUCATION

Bachelor Of Technology

LNMIIT • Jaipur • 2024

SKILLS

Languages: C++, Javascript, Golang, Typescript, Solidity, HTML+CSS

Backend : Nest.js, Node.js, Express.js, Ether.js, Web3.js

Databases : MongoDB, Sql, Redis, BULLMQ

Cloud: AWS, EC2, Lambda, dynamoDB, CI/CD

Front End : React.js, Next.js, Bootstrap, Tailwindcss

API / Oracle : REST Socket.io, Chainlink, Nginx

Containerization : Docker
