EDUCATION

Master of Science in Information Technology, Kaziranga University, Assam 2020 – 2022
CGPA: 8.13

Bachelor of Science in Information Technology, Kaziranga University, Assam 2017 – 2020
CGPA: 8.56

SKILLS

Programming Languages: Python, SQL
Big Data Technologies: Hadoop, Spark
Databases: MySQL, PostgreSQL, Cassandra
Cloud Platforms: AWS, Databricks
Data Warehousing: Amazon Redshift
Other Tools: Microsoft Excel, Git

WORK EXPERIENCE

Data Analyst, Nectar Infotel Nov 2023 - Mar 2024
Guwahati, Assam

- Worked on the **Computerization of Primary Agricultural Credit Societies (PACS) Project** funded by the Government of India.
- Collaborated with Field Assistants to identify and rectify discrepancies, reporting corrected data to management.
- Generated daily, weekly, and monthly reports on PACS operations by coordinating with field teams, delivering insights to senior management.
- Translated the ERP software's frontend from English to Assamese to improve accessibility for local users.

PROJECTS

- IMDb Movie Data ETL Pipeline with Data Quality Monitoring**

Tech Stack: AWS S3, AWS Glue Crawler, AWS Glue Visual ETL, Amazon Redshift, AWS SNS, AWS EventBridge.

GitHub: [View Project](#)

Developed an **ETL pipeline** to process IMDb movie data using AWS services, with built-in **data quality checks**. Extracted and transformed data from **S3** using **AWS Glue**, implementing data quality checks to filter valid and invalid records. Stored valid records in **Amazon Redshift** for analysis and invalid records in a separate **S3** location for further review. Configured **AWS SNS** and **EventBridge** for **monitoring and email notifications** on ETL job status.

- End-to-End Real-Time Data Pipeline for Sales Streaming and Transformation (AWS)**

Tech Stack: Python, DynamoDB, EventBridge Pipes, Kinesis Data Streams, Kinesis Data Firehose, Lambda, S3, Glue Crawler, Athena.

GitHub: [View Project](#)

Developed a comprehensive **real-time data pipeline** for ingesting, transforming, and storing sales data using AWS services. Designed a **Python** script to generate **real-time sales data**, ingested into **DynamoDB**. Captured **Change Data Capture (CDC)** events from **DynamoDB Streams** and routed them to **Kinesis Data Streams** via **EventBridge Pipes**. Utilized **Kinesis Data Firehose** to **batch** and deliver transformed data to **Amazon S3**, with data processing handled by **AWS Lambda**. Implemented **AWS Glue Crawler** for schema discovery and used **Athena** for querying and analysis of the data in **S3**.

- End-to-End Automated Airlines Data Pipeline with Event-Driven Orchestration (AWS)**

Tech Stack: S3, Redshift, Glue, AWS Step Functions, CloudTrail, EventBridge, SNS.

GitHub: [View Project](#)

Developed a fully **automated, end-to-end data pipeline** for ingesting, transforming, and storing **daily flight data** in **Redshift**. Implemented **incremental data ingestion** from **S3** into **Redshift**, handling partitioned flight data. Utilized **AWS Glue** for ETL processing and managing metadata with **Glue Data Catalog**. **Orchestrated** the pipeline using **AWS Step Functions**, ensuring proper execution and error handling for each component. Configured **AWS CloudTrail** to **monitor data events** in the **S3 bucket**, **triggering the pipeline automatically** via **EventBridge rules** upon new data uploads. Integrated **SNS** for real-time notifications on job success or failure.
