EXPERIENCE

Software Developer

Gnani innovations

08/2022 Bengaluru, Karnataka

- Developing and deployed advanced conversational AI IVR bots and chat bots in multiple languages, including English and 5+ Indic languages
- Integrated Generative AI models into chat bot frameworks to deliver highly interactive, human-like conversations, improving user engagement by 30% and reducing manual interventions
- Developed conversational AI systems using Large Language Models (LLMs) to handle complex multi-turn conversations, providing personalized responses, and resolving user queries with 20% higher accuracy compared to rule-based systems
- Enhanced chat bot capabilities by building context-aware dialogue management using transformers, improving the bot's ability to remember and respond to previous interactions in a more coherent and relevant manner
- Built voice-based AI bots by integrating generative models with speech recognition and text-to-speech (TTS) systems, enabling seamless voice interactions in real-time
- Applied Natural language processing (NLP) techniques such as entity recognition, intent detection further enhance chat/voice bot understanding and response accuracy
- Proven track record in delivering quality projects for 11 clients across various industries, including Survey bots, Banking outbound, collection bots, loan bots, voice blasts, vehicle exchange, WhatsApp, chat bots etc
- Successfully deployed an inbound Voice-bot for a major public sector bank on-premises, increasing customer engagement by 30%, reducing response times by 50%, ensuring 24/7 availability, achieving significant cost savings, and improving customer satisfaction by 15%, all while maintaining data security and compliance
- Successfully deployed an outbound voice-bot in the finance sector, leveraging NLP technology to increase client engagement by 60%, reduce communication response times by 80%, and enhance operational efficiency, resulting in a 20% cost savings for the sector
- Created domain-specific chat bots by fine-tuning pre-trained models with custom datasets for industries such as healthcare, finance, and e-commerce, improving query resolution time by 40%
- Experienced in NLP model implementations, with a deep understanding of AI
- Proficient in deploying models for diverse applications, optimizing automation, and delivering exceptional user experiences

Assistant Engineer

Fowler Westrup

11/2020 - 01/2022 Bangalore, India

- A unit of John Fowler, India and Westrup, Denmark Designs, manufactures, and installs machinery and solutions for cleaning, grading, and storing of agricultural products.

EDUCATION

B. Tech in Mechanical

STJ Institute of Technology (VTU)

2015 - 2019

SUMMARY

I am a results-driven software developer, passionate about leveraging data to develop innovative solutions. With 2+ years of experience in the field, Skilled in natural language processing techniques, intent recognition, and entity extraction, Proficient in using the NLP to create sophisticated voice bots and virtual assistants by using generative AI. Adept at integrating machine learning models to enhance dialogue systems and deliver seamless user experiences. Driven by a passion for revolutionizing human-computer interactions through cutting-edge AI innovations.. A seasoned professional with over 3+ years of experience delivering innovative solutions, driving success in dynamic environments.

SKILLS

Python	Natural Language Processing		
Mongo DB	IVR	NO SQL	AWS
Chat Bots	Flask/Rest API		Spacy
LLM	Named Entity Recognition (NER)		
Redis	Language Model Fine-Tuning		
Dialogue Management		Docker	
Flask	GITLAB	IVR	
jupyter notebook		chatbots	
Conversational Ai		Numpy	OOPS
Pandas	Redis	GITLAB	Rest API
Spacy	SQL	VS Code	Gen Ai

PROJECTS

Title: Smart door locking for home Automation using NODE MCU

- it works on the principle of IOT (internet of things) It contains several parts like Arduino, servo motor, smart phone with Blynk app.
