OBJECTIVE

- As an IT Professional with experience working in multi-domain IT platforms and with an attitude to learn new Emerging technologies
- Would be able to swiftly adopt to the current environment and contribute my skillset on the best interests of the organization.
- Currently looking for a Full-Time On-site Job / Remote /Hybrid Environment and **Available to join Immediately for Full time Position.**

PROFESSIONAL SUMMARY

- Results-oriented IT professional with 18 years' experience in **Multiplatform UNIX Systems** (Redhat Linux, Solaris, AIX), **High Availability, Networking, Virtualization, Backup and Storage administration in Virtual Private cloud (VPC), Private cloud (VMware), Public Cloud computing Environment (AWS, Azure)** and **Hyperconverged Infrastructure Environment (HCI)**
- Extensive experience working with Stakeholders in Government, Public and Private Sectors by providing on-site support services in the different Industries (**Banking, Financial Services, Telecommunication, Healthcare, Automobile and Internet Service Providers**)
- Expertise in providing High Availability, Fault tolerance, Replication, Disaster Recovery and Business contingency solutions to Ensure Data Integrity and prevent Single Point of Failure (SPOF)
- Expertise in Design, Build, configuration, administration, and maintenance of Infrastructure servers
- Expertise in Enterprise Backup and Storage systems administration ensuring the Data Integrity, Data Replication and Security.
- Expertise in Data center operations including On-Premises Server Rack mounting and Cabling in the PROD and DR Data Centers.
- Expertise in Virtual Private cloud (VPC) and Public computing Technologies
- Through understanding of ITIL practices, SAS70 /SSAE Audit Requirements, HIPAA Regulatory Compliance, IT Enabled services and Infrastructure Management Services

EDUCATION

Bachelor of science in Mathematics
University of Madras

April,2003

CERTIFICATIONS

- Cisco Certified Network Associate - CCNA
- Solaris Certified System Administrator - SCSA
- Veritas Cluster Server - VCS
- Red Hat Certified System Administrator - RHCSA
- IBM System P Administrator – AIX
- AWS Certified Solutions Architect – Associate - AWS
- VMware certified Professional - VCP
- Microsoft Azure Administrator
- Google Certified Associate Cloud Engineer - ACE

WORK EXPERIENCE

Organization : Innotech Future Inc	Canada , Feb 2022 - Aug 2025
Client : Falcon Ltd working for Client: Capital Health Alberta	
Role : Senior System Administrator – Cloud Infrastructure	
Cloud Environment : AWS, Azure, Oracle Cloud	
Operating Environment : Linux RHEL 7.5, Solaris 5.11, Veritas Infoscale Cluster 7.4, Redhat Satellite	
Projects: - Design and Implement hardware/software setup based on customers requirements - Installation, configuration of Solaris servers on the network environment, including hardware configuration, OS and network Configuration - New server builds for Oracle Database and Applications in Clustered (HA) Environment - Hardware Migration from T5240 to T3-1 Model in Sun clustered Environment - Hardware Migration from M4000 to M5000 for server running Oracle database	
Administration: - OS patching following the VTM Patch management for virtualized servers involving LDOMS, Control Domains, Global Zone and Non-global zones. - Diagnosed and rectified hardware problems include Failures on DIMM module, CPU, Mother board, power supply, HDD failures, SAN HBA cards - Disk replacements have been done by reconfiguring the disks which are in volume management such as SVM and Vxvm. - Update the Python script for patching of Unix servers using Ansible Tool - Used Bash and Python script for automation of Java, JRE, Apache, NGIX agent upgrades - Install of Prometheus agents of managed nodes to monitor CPU and Memory - Administration of Vxvm volumes such creation, perform online relayout such a Grow, Shrink, Resize a Volumes - Administration of SVM volumes such Meta volumes creation, RAID-1 Mirroring and RAID 0 - Administration of ZFS volumes such ZPOOL creation, add SAN disks to ZPOOL and ZFS administration such as Creation, Snapshot and cloning.	

Organization : IT Can pte Ltd	Singapore ,Jun 2018 – Jan 2022
Client : NCS LTD worked for GOVTECH Singapore Govt after G50 Security clearance	
Role : Backup and Storage Virtual Private Cloud Administrator	
Cloud Environment : VMware VSphere 6.5.0 , AWS , Azure and Hyper-V	
Operating Environment : Linux RHEL 7.5 , Veritas Infoscale 7.4 , Redhat Satellite and Red Hat Ansible	
Backup & Storage : Veritas NetBackup 8.1.2 , EMC Dell Data Domain 9800 , &	
Devops Environment : Red Hat Ansible , NetBackup Self Service (NSS) , NetBackup OpsCenter , VMware VRO , VROPS	
Projects: - Veritas Infoscale 7.4 and 8.1.2 upgrade on coordination with Veritas Vendor after Software (SCL) and hardware (HCL) Compatibility Checks. - Performed Nutanix Prism Central upgrade from version 5.11.2.1 to 5.16.1.2 and Nutanix AOS upgrade from version 5.10.3.2 to 5.15.3 - Performed BIOS and Firmware upgrade in DELL PowerEdge servers - Dell EMC Data Domain OS version upgrade to 7.2.0.50 on coordination with Dell EMC Vendor - Dell EMC UNITY OS version upgrade to 5.0.3 on coordination with Dell EMC Vendor - Installed VRealize Operations (VROPS) and SolarWinds for monitoring the Infrastructure Servers based on ICMP ping and Agent based monitoring. Administration: - Administration of Veritas Infoscale & NetBackup by performing scheduled Maintenance Patching & upgrades activities with minimum downtime. - Perform scheduled Linux patching and Red hat Linux OS version Upgrade using Puppet modules in Red hat Satellite Tool on Backup Infra Servers. - Perform package Upgrade (Java jre , Nessus , Apache Tomcat ,etc.) using Red hat Ansible Tool on Backup Infrastructure - Perform Automation for repetitive tasks and streamline the process by using Ansible playbook scripts - Administration of Veritas Infoscale cluster and NetBackup Application services to ensure stability of the Backup Application - Perform periodic checks on the Cluster status and Veritas Replication status (VVR) - VMware Vsphere, ESXi , Vcenter and Nutanix Administration and Operations support in a Hyperconverged Infrastructure environment (HCI)	

Organization : Optimum Solutions	Singapore, Jun 2016 – Jun 2018
Client : DBS Bank , Singapore	
Role : System Analyst	
Environment : Solaris 5.11, LDOMS, RHEL 6 /7 ,Tivoli workload scheduler (TWS) , AIX , VCS, Vxvm , LVM , ZFS , VMware Vsphere client	
Projects: - Storage migration from IBM to Hitachi Data systems (HDS) on Linux, Solaris and AIX operating platforms. - OS migration from Solaris 10 to Solaris 11 and Perform p2v (physical to virtual) Migrations on Linux and Solaris platforms - Server Commission involves plan, deploy and Build the servers in the regionally located Data Centers - Perform New Virtual server build, clone, online relay out for CPU and Memory resources using VMware Vsphere Web console - Installation and setup of Docker on Redhat Linux RHEL 7 servers - Installation of Hadoop (cloudera) on Redhat Linux servers and support for cloudera cluster, Hadoop distributed file system and their components - Enable scripts for DR replication and Participation in DR Test and Business continuity plan (BCP) Administration: - Analyze capacity utilization for CPU, Memory and perform on demand scale-up from the VMware Vsphere Web console - Work with Developers and testers to Deploy Applications using Redhat OpenShift Kubernetes Container platform - Actively manage, maintain and monitor the CI-CD model as per business requirement - Administration and operation of Tivoli workload scheduler (TWS) Application running on IBM AIX and DB2 platforms - Proactive check and deploy Security patching on UNIX systems against some of the critical patches like the Wannacry, Meltdown and spectre	

Organization : Optimum Solutions	Singapore, Jan 2015 – Jul 2016
Client : Deutsche Bank, Singapore	
Role : Senior Infrastructure Engineer	
Environment : Solaris 5.10 , Red hat Linux ,OEL , SUSE , AIX , VCS, Vxvm , LVM , ZFS , BMC Bladelogic	
Projects & Administration: - UFS to ZFS migration in Solaris SPARC servers - ZFS file system creation and ZFS mirroring after ZFS migration - Configuration of NFS mounts points - File system Resize on Vxvm, LVM , ZFS for Solaris, Linux and AIX servers - Implementation of IP filtering Solution – TCP wrappers to administer inbound traffic - Patching activities performed periodically on all UNIX machines (Linux, Solaris and AIX) to fix critical vulnerabilities	

Organization : Emerio Ltd and Opus IT Solutions pte LTD	Singapore, Oct 2010 – Dec 2014
Client : IBM Singapore working for Baxter Healthcare	
Role : System Administrator – Data Center Build and Maintenance	
Environment : Solaris 5.10 , Solaris Containers , M5000/T5220/T5240 , SVM, ZFS, QFS, Sun Cluster 3.2	
Projects: - Design and Implement hardware/software setup based on customers requirements - Installation, configuration of Solaris servers on the network environment, including hardware configuration, OS and network Configuration - New server builds for Oracle Database and Applications in Clustered (HA) Environment - Hardware Migration from T5240 to T3-1 Model in Sun clustered Environment - Hardware Migration from M4000 to M5000 for server running Oracle database - SAN Migration from the DS8100 to DS8700, which involves working extensively with QFS, ZFS and UFS File system having SAN volumes mounted in the new SAN DS8700 Administration: - System Administration for Solaris 10 operating Environment (Physical servers and Solaris containers) & Performing Patch Maintenance every quarter - Transition of User Management Tasks, Capacity Management, Health Checks/User ID Validations to Level-1 Team - On request perform ZFS, QFS, UFS File systems creation and increase as per requirement. - Preparation of Infrastructure documents for New Server Build and updating of Test cases - Creation of new QFS mount point and Addition of QFS resource in Sun cluster - Security Patching performed for the critical vulnerabilities like Heart bleed and Shellshock	

Organization	: CITOS and Wipro Technologies	Chennai , India, May 2007 – Oct 2010
Client	: Citi group	
Role	: Sr. System Engineer	
Environment	: Sun Fire 6800 and 15K/25K, Sun Fire V440/V420, Solaris 5.8 / 5.10, VCS 4.0, VxVM, Control domain, LDOMS, Global and Local zones.	

Projects:

- Migration of OE from Solaris 8 to 10
- Configured the IP and IPMP Multipathing to increase the Network throughput and availability
- Ensure the Network security by tuning IP stack Parameters using ndd [Enabled autonegotiation and promiscuous settings]
- Performed Contingency [COB] Testing for servers in HA VCS environment.
- Performed VCS up-gradation for clustered Solaris servers
- Performed Firmware upgrade of Solaris ALOM, RSC, OBP / system Controller and SAN Stack upgradation for EMC Storage devices

Administration:

- OS patching following the VTM Patch management for virtualized servers involving LDOMS, Control Domains, Global Zone and Non-global zones.
- Diagnosed and rectified hardware problems include Failures on DIMM module , CPU,Mother board , power supply ,HDD failures, SAN HBA cards etc.
- Disk replacements have been done by reconfiguring the disks which are in volume management such as SVM and Vxvm.
- Administration of Vxvm volumes such creation, perform online relayout such a Grow, Shrink, Resize a Volumes
- Administration of SVM volumes such Meta volumes creation, RAID-1 Mirroring and RAID 0
- Administration of ZFS volumes such ZPOOL creation, add SAN disks to ZPOOL and ZFS administration such as Creation, Snapshot and cloning.
- Administration of severs under VCS Control (Includes Online/Offline, Freeze/Unfreeze and Switch the Service Group).

Organization	: SIFY	Chennai , India, Dec 2003 – May 2007
Client	: General Motors	
Role	: System Engineer	
Environment	: Network Monitoring System (NMS) , Solaris 5.9, Sun Cluster 3.1, Veritas Netbackup 5.1	
- Monitoring for Severs and Network Devices, Backup Monitoring and management using VERITAS Netbackup Tool - Installation of SNMP in all Solaris servers and enabled monitoring of system and application parameters - Installation and Upgradation of Solaris Operating System on SUN Enterprise Servers through jumpstart servers - Perform periodic VA scan using Nessus Scanner and perform penetration testing. - Installed SUN software patches for OS, Cluster, and Day light savings
