

OBJECTIVE

As a software developer with 2+ years of development experience in creating and maintaining large-scale applications. Proficient in various programming languages and frameworks, with a strong focus on delivering high-quality features and effectively managing project requirements. Seeking to leverage my technical expertise and collaborative mindset to contribute to innovative projects and drive continuous improvement in a dynamic work environment.

CAREER SUMMARY

- 2.2 years of experience in Software Development.
- Working as an "Associate II – Senior Software Engineer" at Capgemini Engineering, Pune.
- Detailed design, Architect and development of Functional and non-functional requirements.
- Worked closely with distributed teams and managed/developed large scale applications
- Have good understanding of cloud services like Microsoft Azure.
- Using Agile – SCRUM methodology for daily development.
- Worked with and integrated Version Control tools (SVN, GIT).
- Understands Compiled languages, including C and C++ and Modern C++.
- Worked on structure databases such as SQL etc.
- Hands-on experience on C++, MFC, C#, Azure, Visual Studio.
- Worked on Automation POC using C++ and Grpc.
- Strong written and verbal communication skills
- Good organizational and leadership skills.
- Self-motivated and a self-starter, quick learner, comfortable working with remote teams
- Participate in the entire software development lifecycle, building, testing and delivering high-quality solutions.
- Hands on experience on Coverity analysis.

EDUCATION

BE (Comp) University of Pune	2018 - 2022
HSC University of Pune	2016 - 2018
SSC University of Pune	2015 - 2016

EXPERIENCE

Associate II – Senior Software Engineer | Capgemini Engineering

Oct 2022 - present

Technology: Modern C++, MFC , Azure , Git , SVN , C# , .Net ,gRPC etc.

As a Senior Software Engineer at Capgemini, I am involved in large-scale application development, focusing on the development of various features and Change Requests (CRs) using MFC and Modern C++. I lead the design and implementation of client-server architectures with gRPC for enhanced SDK installation control. My role includes development of code using Modern C++

and also includes ensuring code quality through static code analysis and Coverity Analysis for memory leak resolution. I also utilize Git for efficient version control and collaborate with senior teams on system design and documentation.

Roles and Responsibilities:

- Developed and maintained dialog-based applications using MFC, Modern C++, VC++ and STL, ensuring efficient and robust solutions.
- Delivered features to the client over time, ensuring adherence to timelines and requirements.
- Handled Change Requests (CRs) provided by the client, implementing improvements and modifications.
- Conducted log analysis for critical issues and performed static code analysis to ensure code quality.
- Developed high-quality code adhering to Modern C++ standards including multi-threading.
- Responsible for coding, developer testing, code-review, bug-fixing, and maintaining the application.
- Coverity Analysis for the memory leakages in developed code and fixing of those.
- Gained knowledge in using Git for version control, managing code efficiently, and streamlining delivery processes.
- Collaborated with the senior development team to understand system design and architecture, providing feedback on features and CR.
- Managed the documentation for both features and CRs, ensuring clear communication and traceability.
- Worked on CRs related to other project functionalities, enhancing overall product knowledge and contributing to continuous improvement.
- Designed and implemented the client-server architecture, enhancing centralized control over installation process of SDK using C++.
- Integrated gRPC for seamless communication, ensuring fast and reliable remote procedure calls between the client and server components.
- Implemented version tracking functionality, updating a centralized record sheet on the server with the latest installed MRI software SDK version on each client machine.

Engineer Intern | Capgemini

Feb 2022 – May 2022

Technology: C#, .NET, Microsoft Azure , EF CORE , SQL etc.

Capgemini is a global leader in consulting, technology services, and digital transformation. During my internship at Capgemini, I had the opportunity to lead a project team, gaining valuable hands-on experience in project management and team leadership within a dynamic corporate environment.

Roles and Responsibilities:

- Led a team during my internship to develop "ESHOP" an electronic shopping website.
- Hosted on Azure, utilizing Azure Database, Logic Apps, and Function Apps for robust cloud-based infrastructure.
- Implemented MVC architecture in .Net for efficient code organization and maintenance.
- Utilizes Entity Framework Core (EF CORE) for data handling.
- Key use case: Automation of customer email notifications about available products and order-related information via Azure Logic Apps.
- Took active role in design, development, testing and deployment of overall system.

DECLARATION

I hereby declare that all the above information provided is true to the best of my knowledge and will be responsible for any candidature.
