Profile Summary

Detail-oriented and highly motivated software developer with six months Internship hands-on experience at Besant Technologies. Proficient in developing and maintaining web applications, crafting efficient SQL database queries, and integrating front-end(HTML, CSS , Java Script, React Js) and back-end (Python and Java) technologies. Eager to apply skills in full-stack development and database management to deliver high-quality solutions in a dynamic work environment .

Professional Experience

Software Developer Intern

(May 2024 - Present)

Besant Technologies

- focusing primarily on building applications using Tkinter for the user interface and MySQL for database management and I developed Samplesite pro
- company website using HTML, CSS, Java Script, React Js to simplify theprocess.
- I designed and implemented a project where I developed a functional desktop application to manage data efficiently, integrating Python logic with MySQL databases.

Projects

Exam Registration Portal

(Sep 2024 - Present)

Tools - Python , Java , Tkinter , MySQL .

I developed an Exam Registration Portal using Python, Tkinter, and MySQL to simplify the student registration process. The portal features a user-friendly interface, allowing students to input details, select exam subjects, and submit forms.

**Sample site pro Company Website Tools - (Jul 2024 - Aug 2024)
HTML, CSS, Javascript, React Js .**

I developed an Sample site pro company website using Html, Css and Java script , react Js to simplify the student registration process. The portal features a user-friendly interface, allowing company manual about details .

Employee Management System

(May 2024 - Jun 2024)

Tools : MySQL .

I developed an Employee Management System using SQL to streamline employee records, departmental information, and payroll processes. The system includes three interconnected tables: Employees,like IDs, names, job roles, and department affiliations.

Roles and Responsibilites

- Gathered requirements and outlined the project structure for the Employee Management System and Exam Registration Portal.
- Created and configured database schemas in MySQL for managing employee and exam data.
- Developed back-end logic using Python, integrating the applications with SQL for data management.
- Designed user-friendly interfaces with Tkinter for easy navigation and data input.
- Conducted testing, debugging, and optimization to ensure performanceand reliability of the applications.
