Experienced RPA Developer with 4.3 years of expertise in UiPath, specializing in designing, developing, and deploying automation solutions to streamline business processes. I have successfully developed and deployed 5 RPA bots independently and provided ongoing production support. My experience encompasses automating a wide range of processes, including Web, Desktop, PDF, Excel, Outlook, Email, Mainframe, SQL, and Document Understanding, using UiPath tools such as REFramework and Orchestrator. I am skilled in creating scalable automation workflows, managing robotic processes, and troubleshooting to ensure seamless performance. Additionally, I excel in collaborating with stakeholders to analyse business requirements and deliver robust, efficient automation solutions tailored to organizational needs.

Education

Jul 2019 **BCA (Computer Application)**

Hindustan University - Chennai, India

Project Name : Customers Profile Screening

Environment: PDF, Uipath, Desktop Application, Outlook

Duration : December 2020 To April 2021

Description: This process is about updating customers information from PDF into DataTrack Application. Bot needs to access folder to extract PDF files and Update customer information in DataTrack Application. Have developed bot using sequence with PDF automation and created SDD for this project.

Project Name : Clearing Visa Rejects

Environment: Uipath, Outlook, Web Application, Excel

Duration : October 2021 to February 2022

Description: Developing bot of dispatcher and performer using reframe work. Used Queue for adding all the visa reject transaction items. If the transaction is not eligible for chargeback, visa will reject the request and all the rejected transactions will be in Visa reject queue. In Performer bot will open each transaction and check for chargeback eligibility. If it is eligible then bot will assign the transaction to agent and if not bot will clear the transaction from the queue. At the end of the process, bot will send all the consolidated result of the each transaction to SME in .xlsx table format.

Project Name : Intelligent PDF Processing and Data Extraction

Environment: Document understanding, DU Framework

Duration : November 2023 to May 2024

Description: Automate the process of handling various PDF files by extracting and classifying data, generating separate PDF files for each page, and providing a consolidated report. Designed and implemented a taxonomy for 7 locations, accommodating diverse PDF types, including receipts, invoices, and purchase orders. Created and deployed a project in UiPath AI Center using an ML package for document classification and data extraction. Consolidated the extracted data into a well-organized Excel report and automated the process of sending the report to users.
