## OBJECTIVE

Software Engineer with almost **2 years** of experience in **AIML**, seeking full-time **NLP / GEN AI / AIML** roles.

## EDUCATION

|                                                                                                    |             |
|----------------------------------------------------------------------------------------------------|-------------|
| <b>Master of Science – Data Science and Spatial Analytics</b> , Symbiosis International University | 2021 - 2023 |
| <b>Bachelor of Science – Statistics</b> , Pune University                                          | 2017 - 2020 |

## SKILLS

|                  |                                                                                                                                                                                                            |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Technical Skills | LLMs, RAG, Agents, LangChain, LangGraph, LlamaIndex, Vector Databases, Microsoft autogen, Generative AI, NLP, Fast API, REST API, Azure, serverless, Computer Vision, Machine Learning, SQL, Python, OOPs. |
| Soft Skills      | Problem-Solving, Teamwork, Communication Skills, Adaptability, Time Management, Self-Motivated                                                                                                             |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                        |

## PROJECTS

- Conversational Financial Assistant (RAG):**  
Developed a **SOTA** (state-of-the-art) conversational AI ChatBot integrated with over 15 NBFC user data APIs and 4 **CRM** ticket creation APIs. Enhanced its capabilities with advanced multi-point **RAG** (Retrieval Augmented Generation) and **OpenAI function calling** methodologies. Powered by OpenAI's cutting-edge **GPT-4** model and **Langchain** and **LlamaIndex** frameworks, the chatbot delivers exceptional performance. Implemented a **vector database** as a comprehensive knowledge bank, enabling personalized responses to user queries, including account-specific and general financial FAQs. **Managed user sessions** effectively and deployed in a **serverless** environment in **production**, ensuring efficient **scalability** and an outstanding user experience.
- Data Analytics ChatBot:**  
Developed highly accurate structured data analytics genrative AI ChatBot using **pandasai**, utilizing pandasai it enabled the bot to perform complex **data transformations**, provide **data insights**, and **generate plots** all in **natural language** query input.
- Trash classification model for reverse vending machines:**  
Developed a **computer vision** trash classification deep learning model over **8+ categories** for a reverse trash vending machine using **PyTorch** and **ResNet** CNN deep learning models.

## CERTIFICATIONS

- Databricks Certified Machine Learning Associate**
