

SUMMARY

Full-Stack Developer with experience in React and .Net. Passionate about building performant web applications and staying ahead of the curve with the latest technologies.

SKILLS

- .NET
 - ReactJS
- Blazor
 - Bootstrap
- SQL
 - Tailwind CSS
- C#
 - C++

EDUCATION

MIT ADT University, Pune	2021-2024	Y.B. Patil Polytechnic, Pune	2018-2021
Bachelor of Technology Computer Engineering		Diploma Computer Engineering	
CGPA: 7.75		Percentage: 91.09%	

EXPERIENCE

Full Stack Development Intern

December 2023 - May 2024

Stridemex OPC, Mumbai

- Developed RESTful APIs using ASP.NET Core Web API, integrated with SQL Server for robust data management.
- Created dynamic user interfaces with React, ensuring responsiveness and cross-browser compatibility.
- Collaborated effectively with team members to integrate React components with ASP.NET Core Web API endpoints, ensuring seamless frontend-backend communication.

Trainee Software Engineer

July 2024 - Present

Leadrat, Bengaluru

- Backend Developer for Real Estate CRM: Developed and maintained the backend of a Real Estate CRM product using the .NET framework and PostgreSQL, efficiently managing client leads and data.
- Full-Stack Developer for Admin Application: Managed the full-stack development of the company's internal admin application using .NET Blazor, ensuring seamless client data administration and system functionality.
- Database Management & Optimization: Worked with PostgreSQL for database management, optimizing queries and ensuring high performance for data-intensive applications.

PROJECTS

Comparify Website | Frontend development

[Link to Github Repository](#)

Key Skills: HTML Javascript CSS Node.js MongoDB Express.js

Overview: Developed a web service for product search and optimal result retrieval from top e-commerce sites.

- Product Search:** Implemented scraping and filtering algorithms to fetch and present the best purchasing options.
- Messaging System:** Provided a platform for brands to contact for homepage advertising.
- Admin Portal:** Created tools to monitor site activities, manage user messages, and oversee advertisements.

Web Chat Application

[Link to Github Repository](#)

Technologies Used: ASP.NET Core Web API Entity Framework (Database First) SQL Server

Overview: Developed a web chat application for user account creation and real-time messaging.

- User Authentication:** Implemented secure user registration and login features.
- Dynamic Chat Table:** Created chat tables dynamically for each user pair, using foreign keys.
- Message Storage:** Stored messages with timestamps in the respective chat tables.
- Database Management:** Utilized Entity Framework (Database First) for model generation and efficient data management.
