

RACHA KARTHIK

Email: karthikracha789@gmail.com

Ph: +91 8143691996

Career Objective:

To seek a challenging position that encourages continuous learning and creativity in applying my skills and efforts for the development of organization by showing utmost excellence in all spheres of my professional life.

Professional Summary:

- Possesses 4.8 years of working experience as a Senior Design Engineer well versed with Surface modelling, Part modeling and Drafting
- Knowledge in BIW Design & Development of sheet metal Parts and sheet metal operations.
- 3D conversion of BIW components from non-parametric to parametric modelling
- Design, drafting and detailing of Upper body, Under body, Closures parts as per the requirement of customer
- Process role for the 2D & 3D parts like freezing, normalizing, launching to signatory, validations etc

Skills Profile:

Software's : Catia V5/V6(Using PLM) EnoviaV6, Auto CAD, MS OFFICE

Work Experience:

Organization : **SEGULA TECHNOLOGIES (Nov'2021 TO Till date)**

Client : **RENAULT NISSAN TECHNOLOGIES AND BUSINESS CENTRE INDIA PVT. LTD**

Designation : **Sr.Design Engineer**

Organization : **CAAD SOFT ENGINEERING SERVICES.(April'2020 TO Oct'2021)**

Designation : **Design Engineer**

Roles and Responsibilities:

- Creating and developing the of the new product.
- Customer requirement study & input analysis, checking input data based on the input check list.
- Updating the stamping feedbacks.
- Checking the Stamping Feasibility and Assembly sequence of the BIW panels.
- Understanding BIW of Reference, bench marking, Existing Platform
- Creating drawings for all BIW parts and updating drawings, validation and sharing to suppliers
- Creating welding liaisons (welding point's creation) and weld drawings creation with respectively.

Project #1: HCB, Renault Scenic Cars SUV, Europe

Worked on Creation of welding spots and drawings for Upper body, Underbody, Closures.

Software: Catia V6, PLM: ENOVIAV6

- As per respective milestones updating the 2D Drawings and Weld spot creation for entire BIW parts.
- QC Checking and tracking the drawing statuses and considering Geom requests, supplier requests to integrate in drawings and 3D DDM modifications as per supplier requests as per stamping process.
- Interacting with Technical Leads, safety team, Normalization team, geometrical team and different suppliers as per part for the drawing validation, share with the suppliers & storing process.

Project #2: ECHO, Renault R5 E-Tech, France

Worked on Upper body parts like Wheel house, B-pillar areas.

Software: Catia V6, PLM: ENOVIAV6

- As per new styling updating the wheel house assembly area parts as per the stamping feedback.
- Design modification of the B-pillar reinforcement areas based on the stamping feedback.
- Feasibility study based on assembly and manufacturability.
- Creation and modification of the part drawings and assembly drawings.

Project #3: MICRA EV, Renault E-Tech, France

Worked on 3D rules checking, creation of welding spots and drawings for Upper body, Underbody

Software: Catia V6, PLM: ENOVIAV6

- Checking the vehicle parts as per BMIR/3D Rules as per Renault standards.
- Updated the spots for upper body, under body parts simultaneously preparation of weld drawings.
- Preparing the assembly data with weld spot data, Feasibility study based on assembly and manufacturability.
- Tracking the data after TGA milestone as per Design changes and modification of the drawings.

Project #4: ALPINE, A390, Sports car, France

Worked on Creation of welding spots and drawings for Upper body, Underbody, Closures

Software: Catia V6, PLM: ENOVIAV6

- Checking all inputs and updating the drawings according to the 3D as per respective milestone wise.
- As per checklist checking QC for the drawings and follow-up along with the all-department teams like Geom team, Normalization team, safety team, Technical leads and suppliers to get drawing validation process.
- Weld spot creation as per the zones assigned with respective with the milestones.

Project #5: C-Neo, Renault E-Tech, France

Worked on Upper body parts like Roof cross members, roof reinforcement areas

Software: Catia V6, PLM: ENOVIAV6

- Design modification of the Roof cross members, roof reinforcement based on the stamping feedback.
- As per new styling updating the roof bar and checked in assembly level for clearances
- Feasibility study based on assembly and manufacturability.
- As per stamping feasibility i have updated the depression for easy material flow.
- Creation and modification of the part drawings and assembly drawings.

Project #6: P1324, Renault Duster, India

Worked on Upper body parts like Door reinforcement areas Front, back Door stab, Rear door striker, and Cant rail reinforcement, BSO trim modifications

Software: Catia V6, PLM: ENOVIAV6

- Creating the brackets, reinforcement as per the designed and stamping configurations.
- With respective to each milestone changed the minor design changes without cost impact.
- As per analysis team feedback, crash team feedback checked and tested the assembly level and part level

Academic profile:

- Graduate in Mechanical Engineering (B.TECH) in year 2019 with an aggregate of 63% from SVS Group of Institutions(Affiliated by JNTU), Warangal.
- Diploma in Mechanical Engineering in 2016 with aggregate of 74% from Ramappa Engineering college, Warangal.
- Board of Secondary School Education(SSC) in 2013 with aggregate of 78% from Udaya sri high school, Narasampet.

PERSONAL DETAILS:

Father's Name : Racha Rajendar
Date of Birth : 20-06-1998
Languages Known : Telugu, English, and Hindi
Permanent Address : Dasaripally (vill), Narsampeta (mandal), Warangal(dist), Telangana, pincode-506132

DECLARATION:

I hereby declare that the information provided above is true to my knowledge and I bare responsibility of its contents.
