Nov 2022 - Present

AVP L1, RPA Lead, UiPath Citrix, W365 Automation Test Lead, RPA COE Team

Apex Group

Responsibilities:

1. UiPath Test Automation Leadership:

Demonstrated expertise in designing, developing, and implementing UiPath test automation strategies and frameworks within Citrix environments.

Established best practices and guidelines for test automation using UiPath technologies.

Continuously explored and implemented innovative approaches to enhance the efficiency and effectiveness of test automation.

2. Team Training and Guidance on Citrix Automation:

Provided comprehensive training and mentorship to a team of 15 freshers on UiPath Citrix automation techniques.

3. Test Case Development and Automation:

Collaborated with team members to identify test scenarios and successfully automated over 100 test cases using both recording and manual creation of workflows within a challenging timeline of 2 months, ensuring high-quality deliverables.

4. Integration Expertise:

Led the integration efforts of UiPath Test Manager with DevOps pipelines using the Tasktop Tool.

Collaborated closely with DevOps teams to streamline the testing process and ensure seamless integration of automation tests into the CI/CD pipeline.

5. Cross-Project Support:

Offered support and guidance to over 40 team members across different projects in their Citrix application automation efforts, leveraging CV Screenscope activities, validation and assertions, and iterative testing based on feedback and results.

Facilitated bi-weekly knowledge-sharing sessions and provided assistance in resolving automation challenges.

6. Reporting and Communication:

Prepared and delivered weekly status reports on automation progress to the management team.

Communicated key metrics, achievements, and challenges, ensuring transparency and alignment with organizational goals.

7. Documentation and Standards:

Created comprehensive process documentation outlining automation workflows, procedures, and standards.

Developed coding standard documentation to ensure consistency and maintainability of automation scripts.

Conducted Proof of Concepts (POCs) to validate new automation approaches and technologies using both UAT and PROD environments.

Established a library of reusable components for dynamic bot/user account login to various applications and frameworks to accelerate automation development and improve maintainability.
