ACCOMPLISHMENTS

- 16+ years of experience Software Design and Development
- Working experience in Embedded C, C++ 11, 14, 17, OOPs, VC++, MFC, UML, Data Structure, STL, IPC, RTOS (QNX, FreeRTOS), Design Pattern, OOAD.
- Autosar Configuration Tool: ECU Spectrum, K-SAR, EBTresos.
- Google Test Framework
- Hands on experience in Adaptive and Classic Autosar.
- Reinforce scrum methodology and agile framework to team members.
- Work closely with product owner and continuous delivery of features,

CORE QUALIFICATIONS

- Language: C++ 11, 14, 17
- Tools: Visual Studio professional and Code, Eclipse,
- Debugger Tool: Trace 32, GHS
- Protocol: UART, SPI, I2C, CAN, Ethernet.
- Process: SVN, GitHub, Jira, Source Tree, Confluence page, Bazel, CMake.
- Others: Microcontroller, Python, SQL, Socket Programming,
- OS: Windows, Linux(ubuntu)

PERSONAL INFORMATION:

- **Mother's Name:** Kanti Devi
- **Father's Name:** Late Sahno Mahto

Looking for a challenging career in information technology industry and to serve the organization to the best of my abilities and to gain immense practical exposure and become more professionally trained to handle critical situations in the field of computers. Responsible, passionate about delivering outstanding quality and service. Offering 15 years of experience in industry with history of recognition for performance.

EXPERIENCE

June 2024 – Current

LTTS, Bangalore

August 2012 – May 2024

KPIT, Bangalore

April 2012 - July 2012

TATA Elxsi, Bangalore

May 2011 - December 2011

Mindteck India Limited, Kolkata

February 2008 - February 2011

Dover Solutions India, Bangalore

EDUCATION

MCA

National Institute of Technology, Jamshedpur

GPA: 8.03

BSc, Hons Mathematics

Ranchi University

Percentage: 62

12th

B.I.E.C, Patna

Percentage: 57

10th

B.S.E.B, Patna

Percentage: 77

1. # Project Summary:

ZOOX – Remote Rovebot Controller

Description:

This is a handheld device that is used to control an autonomous vehicle when in maintenance mode. It uses NFC to gain access to the vehicle information using wifi. Once connection is established. It can control the vehicle to drive it and also used to read logs of vehicle information, which are displayed on a GUI screen available on the handheld device.

- **Date of Birth:** 7 December 1977
- **Passport No:** Z6348689
- **Marital Status:** Married

Contribution: Detailed design specification as class diagram and sequence diagram. Estimation of task, Coding and writing Gtest for same code.

2. **# Project Summary:**

FOTA Implementation (Installation Module)

Description:

FOTA is defined and referred to as Firmware over the air which is defined as per specification. Fota state machine handles all the different states which is mentioned in the specification for the Big Target ECU, in this case Denvertion. Input signals that arrive from the FOTA master (SGW) have different ports and identifiers. There is different transition state which are used for fota campaign.

Contribution: Going through the specification for installation module. Detailed design specification as class diagram and sequence diagram. Coding and test for same code.

3. **# Project Summary:**

Implementation of INC stack between Automotive Controller and Graphic Controller

Description:

The INC (Inter Node Connection) is constructed on the concept of stacks; each stack is being composed of several layers. This is used to communicate between AC and GC controller. This allows for an easy reorganization as well as inclusion or removal of layers, so INC will be easy to configure for each system as per needs. The INC stack is connected to the platform's SPI /UART and realizes the receiving and sending of data over it.

Contribution:

Currently involved in C/C++ Middleware application development. Technical design sessions with the development teams and clients, including the creation of models and detailed design specification. Coding and writing a Google test for same code.

4. **# Project Summary:**

ECU Spectrum (Automotive) and KSAR Tool

Description:

ECU Spectrum is a configuration editor tool for ECUs. This tool follows the AUTOSAR standard. Users want to import system file for ECUs and generates ECU Configuration Description file. This tool also imports the DBC files, SWC and System Configuration Description file(s) for ECU configuration.

KSAR is a configuration tool. It has more feature as creation of SWC and system file.

Contribution:

Requirements Gathering, Design Documentation for adding new features required by clients.

5. **# Project Summary:**

Nexus MOCVD systems

Description:

Veeco Instruments developed Nexus to provide controllers

and interfaces for systems that include the Turbodisc MOCVD. Nexus generates a graphical interface and window buttons for each major component of a system, making it possible for system operators and engineers to visualize the ways that component elements interact and behave in production. Updated status and conditions of system components appear in Nexus windows, and control over each element in wafer processing is provided within the system interface graphics, lists and buttons.

Contribution:

Coding, Unit Testing. Added some new features required by clients.

6. **# Project Summary:**

ColorQuick / Clarios(On-Web Closed Loop Color Control)

Description:

ColorQuick /Clarios is based on GMI's unique and proven in-line spectrophotometer. This solution uses the industry's most accurate, traceable ISO-standard spectral measuring system to deliver shorter make-readies and higher quality press runs.

Contribution:

Coding, Unit Testing. Added some new features required by clients.

7. **# Project Summary:**

ColorQuick Color Manager

Description:

CQ Color Manager is the most sophisticated suite of reporting and analysis tools available from any CLC supplier. With the charting functions found on the ColorQuick color Manager, you can efficiently analyze and identify the changes in paper, ink and press conditions that really drive color variations in live production. The CQ reports objectively and quantitatively document when density, dot gain, and color shift- and how much. When the real facts are on hand, printers can start controlling color and stop chasing it. ColorQuick also lets you "drill down" into the details of the data.. For even more extensive analysis, most measurement data can also be exported to other third-party analysis software using Access compatible, Excel compatible, or SQL compatible data formats.

Contribution:

Coding, Unit Testing. Added some new features required by clients.
