

Rujul Axayakumar Vyas

Cloud (AWS) System Operations Engineer, Tech Mahindra

[<https://www.techmahindra.com/>]

CONTACT

 Phone

+91 7567567160

 Email

rujulvyas14@gmail.com

 Address

Giridhar Nagar, Near Pune-Bangalore
highway, Warje, Pune - 411058

District: Pune

EDUCATION

- BE in Electronics & Communication
- University: Gujarat Technological University
- College : C.K.Pithawala College of Engineering and Technology, Surat.

MORE ABOUT ME

- Father name : Axayakumar Vyas
- Mother name: Truptiben Vyas
- Marital status: Single
- Language: Hindi, Gujarati, English

CAREER OBJECTIVE

With the main objective being towards satisfaction, both for myself and the company, I strive to work towards the high standards of loyalty and dedication which has been consistent throughout, thereby making work a pleasure.

Determined, energetic and diligent Professional with **3+ years** of experience in UNIX/Linux system administration and AWS Cloud services seeking an opportunity to utilize my talents in a professional capacity, employing comprehensive knowledge and vast professional experience.

EXPERIENCE

System Implementation: [Telecom BSS](#) | [Payment Gateway](#)

Client: [EE Broadband, UK](#) | [Moneris, Canada](#)

AWS Services:

[Amazon EC2 \(Elastic Compute Cloud\)](#) | [Amazon RDS \(Relational Database Services\)](#) | [Bonus Service: Amazon Connect](#) | [Amazon S3 \(Simple Storage Service\)](#) | [Amazon Lambda](#) | [Amazon Cloud Front](#) | [Amazon Glacier](#) | [Amazon EBS \(Elastic Block Store\)](#) | [Bonus Service: Amazon Lex](#) | [Amazon VPC \(Virtual Private Cloud\)](#) | [Amazon Kinesis](#) |

Core Technology Involvement Area:

[Cloud Computing](#) | [AWS-RDS](#) | [VPC](#) | [Cloud Formation](#) | [Auto scaling](#) | [Load Balancer](#) | [SNS](#) | [SQS](#) | [Operating System](#) | [Linux](#) | [Jenkins](#) | [GIT](#) | [AWS Solution Architect](#) | [AWS Sysops Administrator BOM \(AWS Pricing Calculator\)](#) | [Terraform](#)

Strong Work Area Zone: [AWS Admin](#) | [Python](#) | [Unix Shell Scripting](#) | [DevOps](#)

- ❖ Currently Working with **BSS Implementation on Cloud environments** with client [EE Broadband, UK](#)

Devops Tools Used : [GIT](#), [Docker](#), [Jenkins](#), [Terraform](#), [Kubernetes](#), [AWS Devops](#)

Technical Qualification Headlines

Real life System Administration experience, in provisioning, operating, Monitoring and Maintaining Cloud, Linux and Windows Based Mission critical infrastructure, Strong Knowledge of Backup and DR Strategies Understanding of highly Available, Fault Tolerant and Scalable System Architecture on AWS, Understanding of Various automation and Deployment strategies on AWS, Experience working with various AWS-Compute, Storage, Networking and Database-Services like VPC, VPN, EC-2, RDS, ELB, ALB, SNS, SES, Cloud Watch, Auto Scaling, Cloud Front, Route53, S3, Cloud Formation, Lambda, Etc.

Technology Expertise: **AWS System admin, Unix /Linux System Admin, DevOps, Python Script**

EXPERIENCE SUMMARY:

- Administer Amazon Web Service - **ELB, EC2, S3, RDS, SNS, Cloud Watch, Creating/Administering** AMI/Snapshots/Volumes, Upgrade/downgrade AWS resources (CPU, Memory, EBS)
- Experience in architecting secure VPC solutions on AWS with the help of network ACLs, security groups, public and private network configuration
- Setup/ Coordinating Linux Servers on Amazon **EC2, EBS, ELB, SSL, Security Groups, RDS and IAM).**
- Setup/Managing VPC, Subnets; make the connection between different zones; Blocking suspicious ip/subnet via ACL.
- Create S3 buckets and also regulate policies for S3 buckets
- Experience in governing and maintaining IAM policies for organisations in AWS to define groups, create users, assign roles and define rules for role based access to AWS resources
- Create snapshots and amazon machine images (AWS) of the instances for backup and generating clone instances
- Used JIRA to track issues and change management, Creating/handling AMI/Snapshots/Volumes, Upgrade/downgrade AWS resources (CPU, Memory, EBS)
- Troubleshoot Nagios Alerts
- Manage systems **routine backup, scheduling jobs, enabling cron jobs, enabling system logging and network logging of servers of maintenance**
- Create and sustain user's accounts, profiles, security, rights disk space and process monitoring
- Provide technical support by troubleshooting day-to-day issues with various servers on different platforms
- Installed Red Hat Enterprise Linux using Kickstar and applying security policies for hardening the server based on the company policies
- Excellent knowledge of service like **DNS, DHCP, NFS, Send mail, Apache Web Server, Samba, SSH, Telnet, HTTP, YUM, RPM** package management
- Developed UNIX shell scripts to accomplish redundant tasks to simplify in distributed administration
- Built up Linux servers using PXE kick-start services
- Conducted daily system inspection, verified the integrity and availability of all hardware and servers. Resource and reviewed system and application logs.
- Evaluated the performance of the system to ensure it meets business needs.

TECHNICAL SKILLS:

- ❖ **Operating Systems:** Windows (2000/NT/XP), **UNIX, Linux (Red Hat, Ubuntu)**
- ❖ **Programming & Scripting:** **Python (Basic), SQL**, Bash scripting
- ❖ **Web Servers:** **Apache**, Apache Tomcat, **Nginx**
- ❖ **Automation Tools:** **Ansible, Terraform**
- ❖ **Backup Solutions:** **NetBackup**, rsync, tar, zip
- ❖ **Networking & Protocols:** **DNS, TCP/IP, DHCP, SSH**
- ❖ **Security:** Firewalls, **iptables, SELinux**
- ❖ **Monitoring Tools:** **Nagios, AWS CloudWatch, AWS CloudTrail**
- ❖ **Troubleshooting Tools:** **top, free, ping, TCPdump, NETstat, traceroute**
- ❖ **Virtualization:** **VMware ESXi, KVM, vSphere Web Client**
- ❖ **AWS Cloud Services:** **S3, IAM, Route53, VPC, SNS, ELB, ECS, CloudWatch, Auto Scaling**
- ❖ **Project Management & Collaboration:** Atlassian tools (JIRA)

Working Zone – Organization:

Currently working as a **Cloud (AWS) System Operations Engineer** with **Tech Mahindra-**
<https://www.techmahindra.com/> Pune since July 2021 to till date.

PROJECTS;

Project Name: 5G Commercialization

Client: EE Broadband, UK

System: Telecom BSS, CRM, Mediation System

Role: AWS Cloud System Administrator

Project Overview:

Implemented and managed EE Broadband, UK's cloud-based telecom billing platform, providing high availability, scalability, and operational efficiency. Delivered a comprehensive solution for rating, billing, bundling, and contract management tailored to CLECs, wholesale carriers, and IP providers. Key achievements include maintaining over 99.9% system uptime, ensuring disaster recovery readiness, and optimizing system performance for flexible scalability.

Key Contributions:

- **System Monitoring & Performance:**
 - Utilized Amazon CloudWatch to monitor AWS resource utilization, ensuring high system performance and operational continuity.
 - Proactively monitored client transactions, application layers, and database infrastructure to ensure seamless operations.
- **Backup & Disaster Recovery:**
 - Implemented AWS Backup strategies, preserving on-premise and cloud-hosted data integrity.
 - Designed and managed disaster recovery plans, ensuring minimal downtime in critical events.
- **Resource Optimization & Cost Management:**
 - Developed resource tagging strategies for cost allocation, budgeting, and governance, reducing unnecessary expenses by 20%.
 - Created and tracked billing reports, identifying cost optimization opportunities to maximize ROI on AWS investments.
- **Infrastructure Management:**
 - Designed and managed VPCs, URL proxies, C2S access points, and Bastion Hosts to enhance security and scalability.
 - Collaborated with the NISP network team to finalize network connections for client-specific VPC configurations.
 - Managed Amazon EBS volumes and AWS CloudFormation templates to ensure data integrity and controlled access.
- **Cloud Services Implementation:**
 - Set up AWS Catalog offerings to streamline resource provisioning and ensure compliance with organizational standards.
 - Supported Commercial Cloud Services (C2S) and created effective presentations to facilitate client understanding of cloud solutions.

Key Achievements:

- Maintained 99.9% uptime for critical cloud-hosted applications.

- Successfully scaled infrastructure to meet a 30% surge in client usage without performance degradation.
- Streamlined disaster recovery processes, reducing recovery time by 40%.
- Implemented cost-saving measures that reduced AWS spending by \$10K annually.

Project Name: Cloudification of Networks (CON)

Client: EE Broadband, UK

Migration Tool: AWS Migration Hub

Role: AWS Cloud System Administrator

Project Overview:

Led the cloud migration and transformation initiative for EE Broadband, UK, enabling the deployment of Cloud Native 5G Core, RAN, and Edge solutions. Delivered scalable, software-defined networks (SDNs) with enhanced security, flexibility, and automation to support business-critical 5G services. Focused on implementing robust security measures for both the EE Broadband Cloud infrastructure and its service delivery platforms.

Key Contributions:

- **Cloud Migration & Optimization:**
 - Managed large-scale migrations using AWS Migration Hub, ensuring minimal downtime and seamless service continuity.
 - Enhanced system scalability and flexibility, enabling rapid innovation and faster go-to-market strategies for 5G services.
- **Security Implementation:**
 - Designed and implemented security for the EE Broadband Cloud, ensuring availability, service continuity, and resilience against sophisticated threats.
 - Delivered security from the EE Broadband Cloud, provisioning and delivering robust security services to both internal and external stakeholders.
- **Performance Monitoring & Disaster Recovery:**
 - Utilized Amazon CloudWatch to monitor resource utilization and maintain high system availability.
 - Established disaster recovery strategies, reducing downtime and ensuring rapid recovery for critical services.
- **Infrastructure Management:**
 - Configured and managed AWS Virtual Private Clouds (VPCs), URL proxies, C2S access points, and Bastion Hosts for secure and efficient operations.
 - Managed Amazon EBS volumes and AWS CloudFormation templates to ensure data integrity and streamlined deployment processes.
- **Cost Optimization & Resource Management:**
 - Implemented resource tagging for better cost allocation and governance, reducing unnecessary spending by 15%.
 - Created detailed billing reports and developed optimization strategies to align with budgetary constraints and business goals.

- **Automation & Innovation:**
 - Designed a cloud-native 5G Core framework, enabling scalable and fully configurable SDN deployment for both private and public MEC environments.
 - Leveraged automation to improve operational efficiency and scalability, delivering value beyond traditional connectivity.

Key Achievements:

- Successfully migrated over 200 workloads with a 99.9% uptime during the transition.
- Reduced operational costs by 20% through resource optimization and automation.
- Enabled the deployment of a fully scalable, software-defined 5G network, accelerating business capabilities and innovation cycles.
- Enhanced system security, addressing emerging threats and ensuring compliance with industry standards.

Project Name: Unified Payment Terminal

Client: Moneris, Canada

System: Payment Gateway

Role: Unix/Linux System Administrator

Project Overview:

Managed the backend infrastructure for Moneris, Canada's Unified Payment Terminal system, which processes end-to-end payments across multiple payment modes including credit/debit cards, UPI, and mobile wallets. Designed to handle high transaction volumes securely, the system supports global card saving, detailed reporting, and robust APIs for developers. Ensured PCI DSS Level 1 compliance and implemented stringent security measures for a seamless and secure payment experience.

Key Contributions:

- **System Administration:**
 - Installed, patched, and tuned Red Hat Enterprise Linux servers, ensuring system stability and optimal performance.
 - Configured and managed WebLogic and WebSphere Application Servers to support high-volume transactions.
 - Installed and maintained web, application, and database servers on Linux environments to ensure uninterrupted services.
- **Performance Monitoring & Troubleshooting:**
 - Utilized tools like iostat and vmstat to evaluate and fine-tune system performance parameters.
 - Resolved critical issues including system crashes, disk space shortages, and file system errors, minimizing downtime.
 - Troubleshot server-related issues with SNMP and managed processes (start, stop, kill) for optimal system performance.
- **Automation & Task Scheduling:**
 - Developed simple Bash scripts to monitor server health and user access.

- Scheduled periodic tasks using crontab, ensuring timely execution of maintenance activities.
- **Security & Account Management:**
 - Managed user accounts, profiles, and security rights, adhering to organizational security policies.
 - Ensured PCI DSS Level 1 compliance by collaborating with internal security teams and conducting third-party audits.
- **Virtualization & Cloud Support:**
 - Administered 200+ AWS Cloud Instances running on Ubuntu, Red Hat, and Windows, optimizing cloud resource utilization.
 - Worked with virtualization platforms like KVM, VMware ESX, and ESXi, ensuring high availability and system performance.
- **Satellite Servers & Active Directory Integration:**
 - Built channels and pulled packages from master Red Hat Satellite servers, streamlining updates and patches.
 - Integrated and managed Windows Active Directories and LDAP for centralized authentication and access control.

Key Achievements:

- Supported payment processing across 58 banks and 8 mobile wallets, ensuring 99.9% system availability.
- Reduced server downtime by 30% through proactive performance monitoring and issue resolution.
- Automated key administrative tasks, improving efficiency and reducing manual overhead by 40%.
- Delivered a secure, PCI-compliant environment, safeguarding sensitive payment data and minimizing risks.

Declaration:-

I hereby declare that the above-mentioned information is correct to the best of my knowledge.
