SKILLS

- Python
- MYSQL
- NoSQL
- Snowflake
- Snowpark
- Numpy
- SnowSQL & Snowpipe
- ETL
- Data Analyst Visualization
- AWS (S3, EC2, Lambda)
- PowerBi

OBJECTIVE

Software Engineer around 5 years of experience in ETL processes and data management. Skilled in automating ETL workflows using Python and AWS (Lambda, S3). Proficient in Snowflake for data warehousing and pipeline implementation. Focused on optimizing data transformation for business intelligence.

WORK EXPERIENCE

Software Engineer | HCL TECH | Sholinganallur, Chennai

January 2022 – May 2024

Roles and Responsibilities:

- Designed and implemented scalable ETL pipelines to load construction project data into **Snowflake**, integrating **AWS S3, EC2, and Lambda** for real-time ingestion and processing of project data like schedules and materials.
- Developed **Snowflake** schemas using **SQL** for managing project data, optimized performance with materialized views, and automated data transformations using **Snowflake Tasks**, leveraging **Time Travel** for data recovery.
- Wrote **Python** scripts for custom ETL/ELT processes, error handling, logging, and optimized pipeline performance by removing duplicates and following best practices.

PROJECTS

Construction Equipment Usage Data ETL

January 2022 - December2023

- **Data Ingestion:** Equipment data from AWS S3 is ingested into Snowflake via Snowpipe, with a Stream tracking new or modified record.
- **Data Transformation:** Data is cleansed and aggregated using SQL in Snowflake, with Python automating transformations and Snowflake Tasks managing periodic processing.
- **Data Loading & Analysis:** Transformed data is loaded into Snowflake dimension tables, using Time Travel for consistency, with real-time insights in Tableau and Power BI.

Material Usage and Waste Analysis

January 2024 - May 2024

- Built real-time Snowflake data pipelines for tracking material usage and monitoring consumption.
- Developed dashboards to visualize waste data and support reduction strategies.
- Automated material reporting, optimizing resource allocation and decision-making.

Quality Engineer Trainee | Brakes India

July 2020 – July 2021

- **Production Specification Review:** Ensured precise weights and measurements before ingredient mixing, maintaining accuracy and consistency in manufacturing.
- **Incoming Material Inspection:** Conducted meticulous examinations of incoming materials, ensuring accuracy and quality, and maintaining high standards of raw material integrity.
- **Machine Calibration:** Skill fully calibrated machines to sustain optimal productivity levels and uphold stringent quality standards, contributing to efficient and consistent production processes.

Logistics and Warehouse Management | Brakes India (Contract)

July 2019 – July 2020

Inventory Management

- Managed inventory levels across multiple SKUs to ensure accuracy and availability for production and shipping requirements.
- Conducted regular cycle counts, audits, and reconciliations to maintain inventory accuracy and prevent discrepancies.
- Implemented and maintained inventory tracking systems, including **Manhattan Scale**, to monitor real-time stock levels and streamline stock movement.

Warehouse Operations:

- Supervised warehouse staff in receiving, picking, packing, and shipping activities to maintain operational efficiency.
- Monitored inbound and outbound shipments, ensuring timely and accurate deliveries that align with customer requirements and deadlines.
- Oversaw the storage, handling, and distribution of products to reduce waste, prevent damages, and optimize space utilization.
