Area of Interest

- Employee engagement
- Team upskilling/ development
- Value chain improvement
- Customer/ Vendor handling
- Multi-cultural experience across globally distributed teams

Languages

English, German, Hindi,
Malayalam, Tamil

Education

B.E (Mechanical Engg.) – Sri
Krishna college of Engg and
technology (2003 – 2007)

Summary

Engineering leader with 17+ years embedded automotive experience leading global teams in tier 1 OEMs focused on team development, moving up the value chain, efficiency improvement and talent management with focus on Autonomous driving systems.

Knowledge areas

- Project/Program Management
- Autonomous driving/ ADAS
- ASPICE
- Requirements management/ System Engineering
- Vehicle testing/ Diagnostics/ Brake systems
- FuSa (ISO 26262) and SOTIF
- Testing using Hil/ Testing management
- Agile methodologies

Skills/ Tools

- JIRA/ Confluence/ Github/ Lucidchart
- Enterprise architect/ DOORS/ Codebeamer
- End to end SDLC experience (RFQ to SW delivery to Customer issues handling)
- CCB/ field issues mitigation /risk management

Work Experience

KPIT technologies India - Kochi (Aug 2023 till March 2025) Program manager – Body practice (Cybersecurity)

- Project/Program management
- Stakeholder discussions with customers
- Management discussions/ status updates /BRPs
- Conduct Review meetings
- Risk management

ZF India – Chennai (May 2021 to Aug 2023)

Engineering Manager:

Responsible for ADAS application and function development.

- Program/ Project management for 3 FD teams with 25+ HC
- Resource planning, allocation and tracking
- Team Performance and appraisal discussions
- Team upskilling planning and drive talent management
- Drive implementation of CIP and other engineering processes
- Execute implementation of engineering strategy
- Vendor management
- Ensuring adherence to regulations
- Budgeting and hardware procurement

Lead Engineer:

- Responsible for Automatic emergency braking and sub features.
- Manage technical requirements for product development
- Perform system, product and software definition and specification
- Plan and ensure execution of all engineering related tasks (design, testing, validation, FMEA, DFMA, Design to Cost, roadmaps, gate reviews as applicable.
- Manage domain engineering costs by resource planning and tracking
- Coordinate engineering content across cross-functional engineering teams
- Execute domain engineering roadmap within project

KPIT GmbH – Munich (March 2019 to May 2021)**BMW Autonomous driving campus**

- SOTIF/ ISO26262
- System engineering for SAE level 3/4 systems
- Safety analysis, calculations for AD functions

Robert Bosch Engineering and Business Solutions – Coimbatore (June 2007 to March 2019)**Robert Bosch Automotive Steering:****Team Lead: Jan 2017 - Feb 2019 (2 years 2 months)**

- Leading the team to devise and implement cyber security for the power steering business unit.
- Leading a cross functional team to pilot implementation of power steering functionalities on a system engineering model.
- Strategizing and implementation of a variant management system for the VW power steering projects.

Associate Project Manager: Oct 2012 - Dec 2016 (4 years 3 months)

- System requirements management for electric power steering system development using DOORS and Enterprise architect.
- Handled projects independently with ASPICE compliance, including participation in the acquisition phase of projects by establishing the OE system requirements with the existing platform.
- Generation of requirements based on the change request from OE and maintaining the bilateral traceability between the customer requirements to test evidence and ensure fulfilment of OE requirements by cross functional teamwork among various department, viz testing, development etc.

Robert Bosch Automotive Aftermarket:**Senior Software Engineer: Apr 2010 - Oct 2012 (2 years 7 months)**

Bosch Brake testing systems/ Bosch Service Instruction Systems:

- Creation of OE specific brake test routines for the Bosch Beissbarth brake test bench.
- Vehicle testing of developed SW on the brake test bench in Germany.
- Creation of the troubleshooting manuals & wiring diagrams for the airbag systems.

Software Engineer: Apr 2008 - Apr 2010 (2 years 1 month)

- Requirement management of Automotive diagnostics system.
- Liaison with the customer team to ensure requirement fulfilment.
- Handling customer changes and field issues mitigation and activities for the release of the updates for the software.

Associate Software Engineer: Jun 2007 - Apr 2008 (11 months)

- Development and testing of Automotive diagnostics equipment
- Vehicle testing of SW & HW on the vehicle.
