CAREER OBJECTIVE

Experienced Data Engineer with 2.11 years of hands-on experience in optimizing data pipelines and leveraging AWS services. Passionate about driving data-driven innovation and operational efficiency, seeking to apply expertise in ETL methodologies and AWS to contribute to a dynamic tech environment's success.

EXPERIENCE

Data Engineer

NetZero Sustainability Economics India Pvt Ltd

June 2024 - Present - Bengaluru,Karnataka,India

Unosis IT Solutions pvt ltd

Jan 2022 - June 2024 - Bengaluru,Karnataka,India

Contributed to end-to-end data processing and transformation pipelines:

LegalStreamline

- Automated the extraction and transformation of unstructured legal data using AWS Lambda and regex, storing results in MySQL.
- Ensured continuous data processing from S3 with Lambda triggers, optimizing the pipeline for better client data access.

Data Pipeline with Apache Spark and Databricks

- Built an automated data pipeline using Apache Spark and Databricks. Extracted, transformed, and cleansed data stored in AWS S3.
- Automated workflows for regular updates and conducted in-depth data analysis and visualization.

Physical Risk

- Optimized NetCDF global datasets by converting them into Zarr format and storing them in AWS S3 for scalable data access using Python.
- Built ETL pipelines and migration scripts to move on-premises data to AWS DynamoDB; implemented efficient NoSQL schemas and JSON-based data models.
- Automated geospatial data extraction and analysis with GeoPandas, focusing on regional attributes and location-based analytics.
- Configured and executed WRF and WPS models for climate data downscaling in Linux environments.
