PROJECTS

MamaStops (03/2022 - 11/2023)

- Objective: Map integration, Socket integration, Delivered Transport items.
- Mamastops is an advanced application designed to optimize the logistics and transportation hierarchy for consignments traveling from point A to point B. It effectively manages and tracks all transactional aspects related to the journey, including fuel, parking, tolls, weighbridge fees, and clearing agent services. The application streamlines the transportation process, providing comprehensive oversight and efficient handling of various operational costs and activities.
- Technologies Used: Kotlin, XML, Coroutines, Clean Architecture etc.
- Link - <https://play.google.com/apps/test/com.mamastop/18>

KKISAN (04/2024 - Present)

- Objective: Map Integration, Delivered Seed, Pastiside Items. It is Government of Karnataka Projects.
- The KKISAN Mobile Application is designed specifically for field officers to facilitate comprehensive field operations. It supports tasks such as pre- and post-inspection, distribution management, auditing, and geo-tagging. This application streamlines field activities by providing a robust platform for accurate data collection and operational efficiency, enhancing the overall effectiveness of field operations.
- Technologies Used: Kotlin, Xml, MVVM, Hilt, Coroutines, Java

LBY(Mobile Application) (06/2022 - 09/2022)

- Objective: Map integration, Video editor with all the paint tools, Slow Motion, Frame by frame video rendering etc.
- LBY is an innovative application designed to support students preparing for competitive exams. It enables users to locate and book nearby libraries online, providing a conducive and peaceful environment for focused study sessions. By streamlining the process of finding and reserving study spaces, LBY enhances students' ability to prepare effectively and efficiently.
- Technologies Used: Kotlin, Xml, MVVM, Hilt, Coroutines
