

SKILLS

SQL, Apache NiFi, IBM DataStage, SSRS, IBM Cognos, DBT(Data Build Tool), Snowflake, ORACLE, Python, Postgres SQL, SQL Server, MySQL, Pyspark, AWS, Git.

EXPERIENCE

Software Engineer

July 2021 - Present (**Prolifics**)

- Led end-to-end ETL process development, including data pipe-lining, cleansing, transformation, and migration across platforms such as SQL Server, Snowflake, DBT and Oracle.
- Optimized data migration and transformation workflows by improving query structures, leading to enhanced system performance and reduced data processing times.
- Collaborated with cross-functional teams for requirement gathering, ensuring smooth execution of migrations and addressing client needs effectively.
- Conducted data quality assurance by identifying and resolving data inconsistencies, performing unit testing, and collaborating with QA teams to maintain data integrity post-migration.
- Designed and optimized database functions, stored procedures, and triggers to improve performance and reduce latency by 30%.
- Implemented performance tuning for large-scale ETL processes, utilizing IBM Data-stage for efficient resource allocation and process orchestration.
- Engaged in client interactions for ongoing project updates, gathering feedback, and refining project deliverable based on evolving business requirements.
- Developed in-house tools for data migration and validation using NiFi, Python, and Snowflake, enhancing automation and minimizing manual intervention.
- Improved application performance through code optimization, indexing, and efficient table structures, contributing to a 30% increase in query and reporting performance.

PROJECTS

BOYD Gaming (Data Migration & Reporting Project):

Led the migration of SQL Server stored procedures, functions, and views to Snowflake, ensuring platform compatibility and optimal performance. Optimized queries and improved overall data processing, resulting in a 30% performance boost in report generation.

Developed efficient data pipelines for data processing, cleansing, and transformation, improving the reporting accuracy and speed for the business. Collaborated with business users and cross-functional teams to understand reporting requirements and deliver tailored data insights through MicroStrategy.

Compass Transition & BAU Services:

Managed ETL development using IBM DataStage for processing large datasets and performing data transformations for multiple clients.

Enhanced the system's performance by creating master sequences for full-load processes, ensuring timely data availability and improved ETL efficiency. Successfully integrated and managed multiple data sources and targets, ensuring smooth synchronization across environments.

Tribal Group - SQL to Oracle Migration:

Migrated business-critical reports from SQL to Oracle, ensuring smooth and error-free transitions. Validated and optimized SQL and Oracle queries, improving query execution times and ensuring data accuracy.

Innovation Project on NiFi (ETL Tool Development):

Developed an ETL tool to automate the migration of data between multiple sources, including SQL, Snowflake, and MySQL. Built and tested custom Python scripts to automate complex data migration tasks, increasing efficiency and reducing manual workloads.

CERTIFICATIONS

- Databricks Accredited Lakehouse Fundamentals
- SQL Analyst Associate

ACHIEVEMENTS

Received the Top Performer Award from Prolifics.

EDUCATION

Yeshwantrao Chavan College of Engineering, Nagpur

BE/B.Tech 7.37

2021
