EDUCATION

T. John Institute of Technology , Bangalore
Bachelor of Engineering in Computer Science

Aug 2019 - May 2023
CGPA : 8.9

DAV Sr. Sec. Public School , Singrauli
12th CBSE , PCM

Apr 2017 - May 2018
CGPA : 8.2

WORK EXPERIENCE

Flipkart | Production Support Engineer

May 2023 - Present

- **Client Onboarding & Integration:** Successfully onboarded external clients such as Lenskart, Paytm, Croma, and Snapdeal to Ekart services, ensuring seamless integration with both staging and production environments.
- **Automation & Scripting:** Developed Python scripts to automate recurring tasks, significantly reducing manual effort. Created and deployed cron jobs to enhance visibility for operations, ensuring efficient and timely processing.
- **Issue Resolution & Debugging:** Actively involved in debugging P0 issues, performing timely data fixes to unblock operations. Researched, diagnosed, and resolved technical issues related to feature integration, while adhering to SLAs.
- **Kubernetes Management:** Utilized Kubernetes to manage containerized applications, optimize resource utilization, and track logs across multiple clients. Debugged and resolved issues using K8s logs, improving system reliability.
- **Documentation & Team Support:** Documented workflows and played a key role in onboarding new team members. Provided mentorship and ensured a smooth transition.
- **Collaboration & Communication:** Collaborated with cross-functional teams to ensure all stakeholders were promptly informed of issue statuses. Played a vital role in identifying product gaps and communicating them to Product Managers.
- **Client Experience:** Provided clear, user-friendly guidance to non-technical and business teams throughout the feature integration process, ensuring overall project success and a seamless experience for clients.

PROJECTS

NETFLIX MOVIE RECOMMENDER | Python, Machine Learning, Steamlit

Jan 2024

- The project aims to build a recommendation model for Netflix movies based on the user's previous watch history to save time for finding relatable movies.
- The project uses Python with libraries like pandas, scikit-learn, and NLTK to build a recommendation model for Netflix movies. It preprocesses data by selecting relevant columns, handling missing values, and converting strings into lists. The main model calculates movie similarities using text vectorization, stemming, and cosine similarity, and it's saved for future use

FLIPKART SENTIMENT ANALYSIS | Python, Machine Learning, Steamlit

Oct 2023

- Developed a Sentiment Analysis model for Flipkart reviews using NLTK's VADER module, showcasing expertise in natural language processing.
- Achieved high accuracy in sentiment classification through the use of classification algorithms, highlighting strong analytical and modeling skills.
- Implemented robust data preprocessing and visualization techniques to extract insights from the dataset, ensuring comprehensive analysis and model performance

INTRUSION DETECTION SYSTEM | Python, Machine Learning, Dash

Apr 2023

- Developed an Intrusion Detection System (IDS) using machine learning techniques.
- Trained five distinct machine learning models (Random Forest, Naive Bayes, KNN, SVM, Decision Tree).
- Achieved significant accuracy rates across models, enhancing identification and mitigation of security threats

TECHNICAL SKILLS

Languages: Python, R , SQL, C

Software & Tools: Jupyter Notebook, Google Colab, VS Code, Sequel Pro, MySQL, Postman, Git, Google Data Studio, Power BI, Microsoft Excel, Docker , AWS(Cloud)

Frameworks & Libraries: Pandas, Numpy, Matplotlib, Scikit-learn, TensorFlow, Flask, PySpark
