Summary

I am a dedicated blockchain developer and researcher with a strong background in developing innovative solutions for blockchain security and secure smart contract development. I am enthusiastic about making meaningful contributions to innovative projects in this field.

Experience

May 2023 – **Blockchain Developer, CDAC Patna**

- Present
- **SecurlyScan:** Currently developing a machine learning model to detect vulnerabilities in Ethereum smart contracts.
 - Conducted extensive research and utilized all available tools like Slither, Mythril Analyzer, and other tools in the field of smart contract vulnerability detection.
 - Created a custom dataset by leveraging various tools to enhance the accuracy and reliability of the model.
 - **SecureScanAI:** SecureScanAI is an innovative project harnessing AI technologies like Natural Language Processing and Prompt Engineering to detect vulnerabilities in smart contracts. Powered by Python, Panel, and OpenAI, it offers an interactive solution to enhance smart contract security.
 - **Real Estate Buy and Sell using Blockchain Technology:** Real estate transactions are traditionally done using physical documents, which can be tampered with or forged, causing delays in verification. Online records can also be manipulated. To solve this, we created an app that stores records on a blockchain network, creating an immutable, permanent record. Properties are listed as NFTs, and ownership is transferred when a buyer purchases the NFT.
 - **High Performance Computing Project (Learndex):** Developed advanced analytics features for High Performance Computing Learndex, leveraging a technology stack that includes ReactJs, MySQL, ExpressJs, NodeJs, and JavaScript.

Academic Projects

2022 **Developer, Pneumonia Detection using Deep Learning Algorithms**

This project helps for quick and accurate detection of Pneumonia. This will help doctors to make initial diagnosis and prioritize patient screening based on chest x-ray images.

- Developed a deep learning model for pneumonia detection from x-ray images.
- Achieved high accuracy to aid in medical diagnosis.

2022 **Developer, Campus Management System**

This application will help campuses to secure students from COVID spread and restrict entry to only vaccinated and COVID negative test students. Also, it will recommend students what action needs to be taken for safe campus entry.

- Implemented a system to manage campus entry during the COVID pandemic.
- Developed features to recommend safety actions to students.

Education

- March - 2023 **Post Graduation Diploma**, *Center for Development of Advance Computing*, City Fintech and Blockchain Development
- May - 2022 **Bachelors of Engineering**, *Ramrao Adik Institute of Technology*, Navi Mumbai
Electronics and Telecommunication

Skills

Programming Languages Solidity, JavaScript, Python

Platforms React, Express, Node.js, Ethereum, Internet Computer Protocol (ICP)

Tools Git, Ganache, Hardhat, Slither, Mythril

Learning Rust

Certifications

- 1 **Certificate of Hyperledger Fabric**, *Hyperledger Foundation*
- 2 **Certificate of Using Python to Access Web Data**, *Coursera*
- 3 **Certificate of Python Data Structures**, *Coursera*

Accomplishments

- Achieved 3rd prize at BlockBash Hackathon 2024 during the 7-day challenge focused on Internet Computer Protocol.
- Secured Second Prize at TechSpark 2023.

Industry Contributions

- 2024 **Speaker**, *Economic Offence Unit, Bihar Police*
Delivered a session on "Cryptocurrency Crime Investigation" to the Cyber Crime Investigation officers.
- 2024 **Organizer**, *International Symposium on Security Engineering for Trusted Cyberspace (ISSETC)*
Played a key role in organizing the symposium.
