EXPERIENCE

Client Account Specialist

Rogers Communications Inc.

📅 02/2024 - 09/2024 📍 Ottawa, Ontario, Canada

Offering seamless and simple technology to clients.

- Working with clients directly to create effective sales solutions closely following their unique needs and requirements.
- Serving as the primary point of contact for customers for sales and service inquiries while being readily accessible to address questions or concerns.
- Team Leader: Managing a small team, along with the business and revenue brought in through client interactions, including record keeping, sales metrics, and proper documentation of transactions.

Freelance Software Developer

Self-Employed

📅 05/2020 - 08/2022 📍 Mumbai, Maharashtra, India

Develop software for clients over the internet for a commission.

- Develop software tailor-made with the specific requirements and use-cases of the client in mind.
- Determine a Software Development Life Cycle (SDLC) Model to accurately and efficiently work on projects.
- Create specific test cases using Google Test (G Test) to catch bugs and glitches before release.
- Deployment of the application over the platform(s) of the client's choosing.

Computer Sales Associate and Repair Technician

Pius Computers

📅 04/2017 - 07/2018 📍 Mumbai, Maharashtra, India

Build, repair, and sell computers, components, and software.

- Interact with clients to build systems accurately reflecting the use-cases and needs of the client.
- Proficiently being able to identify, address, and repair hardware and software related problems.
- Working knowledge of software that are currently in-demand and being able to recommend them to interested clients accordingly.
- Keeping records of business and transactions to create sales metrics that accurately depict the current state of the business.

PROJECTS

Moteur

🔗 [GitHub](#) 🔗 [YouTube](#)

Open-Source game engine created using C++ and OpenGL.

- Designed using the ECS (Entity, Component, System) Pattern.
- A third-party physics engine called Bullet Physics is used to simulate physics in the 3D environment.
- Models and animations are loaded using Open Asset Import Library (assimp).
- Sounds and music are loaded with the help of FMOD.
- Shaders are written in GLSL (OpenGL Shading Language).
- Scripts are written in Python and Lua.

Maze Navigation

🔗 [GitHub](#) 🔗 [YouTube](#)

Multi-threaded OpenGL application.

- A multi-threaded OpenGL application that where entities navigate a maze of 1000 x 1000 (1000 sq units) in size.
- Spawns 1000 hostile entities randomly scattered across the maze.
- Entities navigate the corridors of the giant maze to hunt other entities of their own kind.

Simple AI

🔗 [GitHub](#) 🔗 [YouTube](#)

Simple Implementation of the A* Algorithm.

- The Application uses a simple implementation of the A* Algorithm to navigate a landscape generated using BMP and PNG images.
- Input image can be dynamic i.e. it can be anything that has black and white pixels in it, akin to something made in MS Paint.
- As long as there is a way through, the entity will navigate the terrain going from point A to B, avoiding any obstacles along the way.

VOLUNTEERING

Head of Department (Photography)

Utsav Fest

📅 02/2019

📍 Mumbai, Maharashtra, India

📖 Managed the photography of an entire five-day event.

Department of Lifelong Learning and Extension (DLLE)
